Un 33 n¹ A

My dear Mr. Dill:

It is an honor and a privilege to transmit to you the published report of the Real Property Survey, and the Low Income Housing Area Survey, a work performed under the encouragement and guidance of your Executive Director, Albert J. Evers. These surveys are, respectively, an inventory of one of the primary factors which influence the lives of every one of us - our homes - and a survey of the economic characteristics of families whose homes have been found to be inadequate.

This report consists of three volumes:- first, the analytical and statistical summary; second, graphic presentation of basic housing factors; and third, a general summary, less technical in nature, for distribution to the lay public.

Although the primary aim of this report is to provide complete and comprehensive data so that community planning and remedial action may not be aimless but thoroughly effective, many commercial concerns, banks and lending institutions, and private individuals will also use and refer to the facts in this report. The major responsibility, then, is to present the true facts, regardless of whether these facts are better or worse than the community had previously imagined. To this end, all who have been associated with these surveys have labored to insure the authenticity of the data - checking and rechecking the work to eliminate all material whose validity could be doubted.

It has been a great pleasure to direct this survey and supervise the project operations for the Work Projects Administration. All of the technical and administrative workers on the surveys were competent and diligent. The keen interest of numerous civic organizations and the cooperation and assistance of the administrative officers of the Work Projects Administration, of the staffs of the local Housing Authority, of the several city departments and of the State Relief Administration was gratifying.

Sincerely yours

Wayne F. Daugherty

ALBERT J. EVERB
EXECUTIVE DIRECTOR
WILLIAM A. O'BRIEN
COUNSEL
TELEPHONE YUKON 1561

December 17, 1940

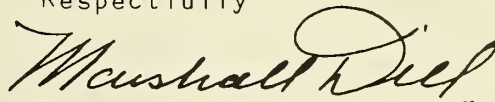

To the Honorable Angelo J. Rossi, Mayor
and the Honorable Board of Supervisors
City and County of San Francisco
City Hall
San Francisco, California

Sirs:

I have the honor of submitting to you the published report of the Real Property Survey and the Low Income Housing Area Survey of the City and County of San Francisco. This extensive and authoritative work was sponsored and directed by the Housing Authority of the City and County of San Francisco, which had immediate need for its findings in order to plan a housing program that was based on fact and not mere well-meaning theory. It was made possible by cooperation with the Work Projects Administration and the several hundred employees that it hired, and by financial assistance from the State Relief Administration and from you. And it was assured of success by the excellent response of all the citizens of San Francisco.

The rapidity of growth of San Francisco was phenomenal. But it got over its *growing pains* more quickly than do most cities and has long prided itself on being a *good* city to live in, rather than a *big* one. As this letter is written, the leading newspapers and citizens of San Francisco are speeding action toward a master plan for the healthy growth and more orderly development of the city. It is with continued hope for the future welfare of San Francisco, then, that we submit this picture of its present living conditions.

Respectfully

Marshall Dill
Chairman

San Francisco

San Francisco, California
January 21, 1941

To the Honorable Angelo J. Rossi, Mayor
and the Honorable Board of Supervisors
City and County of San Francisco
City Hall
San Francisco, California

Sirs:

It was with a deep and lively interest that I followed the Progress of the Real Property Survey since the start of project operations on March 17, 1939 until the completion date, January 15, 1941.

The efforts put forth in this survey will, I think, prove of great value as a basis for all future action concerning the housing of all our citizens. We are, consequently, very glad that the Works Projects Administration was able to play an important part in its execution.

There were many complex problems to be met and solved during the life of the project and I want to express to you my deep appreciation of the fine spirit of cooperation shown by you, as the Sponsor, that enabled us to bring to a successful conclusion this important piece of work.

Cordially,

A handwritten signature in dark ink, reading "M. Philomene Hagan". The signature is written in a cursive, flowing style with a large, prominent "M" and "H".

M. Philomene Hagan, Director

ACKNOWLEDGEMENTS

Many organizations and individuals generously assisted this Survey. Messrs. William R. Lawson, Richard Shaw, James B. Sharp and Misses Hope Cahill and Philomene Hagan of the Work Projects Administration cooperated fully and assisted in all possible ways. All City Departments and especially Clyde Healy, Asst. City Engineer, and Harold J. Boyd, Controller of the City and County of San Francisco, supported and advised the Survey staff throughout project operations. Mr. Jack Stark and other administrative officers of the State Relief Administration expedited our many requests for materials and aided in many situations. Of the Federal Housing Administration, Messrs. K. C. Beede and George W. Morris criticized and assisted with the problems of presenting Volume II - Graphic Presentation. Mr. Peyton Stapp, Regional Research Advisor, United States Housing Authority, worked with the project during its inception and when gathering the data and summarizing the findings of the Low Income Housing Area Survey. Messrs. Koeber and LeHane of the Chamber of Commerce and the members of the San Francisco Housing Association were par-

ticularly helpful. Many others not mentioned encouraged and lent assistance and advice when needed.

The Fire Department made space available for squad headquarters at all the fire houses, and the Police Department, besides identifying all field workers to insure satisfactory relations with the public, also granted use of space in several precinct stations. Publicity was extended by all the newspapers; Radio Station KFRC also gave publicity to the Survey in a series of dramatic sketches, *The Housing Reporter*.

Project operations were ably guided by a staff of expert technicians and supervisors: Earle J. Wickstrom, Technical Assistant; Mervin J. Kidwell, Administrative Assistant; and Assistant Technical Supervisors, especially Charles Bratt, William D. Clarke, Leonid P. Haminsky, Margaret B. Howard, Lillian G. Hughes, Bruce McKillen, Lim P. Lee and Helen Reid. Editorial review of the report and presentation of Volume III was made by Bernard Taper.

PURPOSE AND SCOPE

This survey was inaugurated by the Housing Authority of the City and County of San Francisco so that its actions in rehousing citizens of low incomes might be based upon a comprehensive understanding of all the facts involved, not only of the housing conditions of the comparative few that the program helps directly but also of the housing conditions of all of the citizens of San Francisco. The broad purpose of this published report is to present, for all the organizations and individuals that might find them useful, the basic and relevant facts pertaining to housing in San Francisco¹.

This picture of housing is essentially a cross section and, of course, does not show the trends in housing conditions from year to year. If the data are kept up to date, this survey will serve as a bench mark from which it may be possible to evaluate existing trends. In addition to their usefulness to the agencies concerned directly with housing, the data in this survey afford a base for research in the fields of health, crime and delinquency, zoning, land uses, fire prevention, population trends, public and private relief assistance, and many others.

This report consists of two major sections, the Real Property Survey, an inventory of the physical conditions prevailing in existing housing accommodations and the Low Income Housing Area Survey, a survey of the economic conditions and characteristics of families living in substandard dwellings. The Real Property Inventory included every structure and dwelling unit in the city and county, and for this inventory a house-to-house canvass was conducted. The standard

technique, as provided through the joint efforts of the Federal Housing Administration, the Central Statistical Board, and the Works Progress Administration, was employed throughout this survey, except where local conditions warranted deviation. The Low Income Housing Area Survey included a representative sample of those families living in substandard dwelling units. All sections of the city were included, since all but the new Sunset district contain substandard housing.

The Real Property Inventory presents data pertaining to residential structures and the dwelling units within these structures. For each structure there is information on type and exterior construction; year built and present condition; the value and mortgage status of single family homes occupied by the owner; and the presence of business units, garages and basements. For each dwelling unit there is information on occupancy, whether by owner, tenant, or vacant; the length of time occupied or vacant; the monthly rental; number of rooms; adequacy of plumbing; type of heating, lighting, cooking and refrigeration equipment; cellar locations; windowless rooms used for living purposes; number and age of all persons; race; number of roomers and number of extra families.

In the second major section, the Low Income Housing Area Survey, information is presented on family composition; employment status of occupants; source and amount of income; location and industry of employment; adequacy and physical characteristics of the dwelling unit and expenditures for certain household facilities including refrigeration, fuel and garage; and kind of trans-

¹ Land use, important to a complete understanding of housing, was not undertaken by this survey, since data

are already available from previous surveys conducted by the City Planning Commission.

portation used in reaching work as well as time consumed in transit. This information will throw light on the extent of need for new low rent housing and will aid in determining the type, needed accommodations and the most suitable locations of such required housing.

Besides these two major sections there is a section on residential hotels, a type of housing peculiar to San Francisco. 499 of the 747 hotel structures in this city have ceased catering to transients and rent predominantly to a

residential population.² It was impossible to clearly segregate the latter from the former for the purposes of this survey, as many hotel owners are reluctant to admit the changed status of their hotels.

The 34,288 inventory schedules representing, primarily, one room dwelling units in these structures are an incomplete coverage of this type of permanent residence; this large number, however, does emphasize its importance in the pattern of San Francisco housing.

² Many rooming houses, 'flop' houses, etc., have licenses which classify them officially as hotels,

but were not so classified by this survey. See Definitions.

HISTORY OF HOUSING IN SAN FRANCISCO

In 1776, at the time that our thirteen colonies were fighting for their independence, the first Spanish settlers came to the San Francisco peninsula and established small colonies centered around the Mission and the Presidio. Sixty years later the American colonists began to arrive and establish a trading post at Yerba Buena cove, near the northeastern point of the peninsula. Before this cove was filled in the water came up to what is now the heart of the business district.

Control of community welfare was recognized by these early traders and settlers. In November, 1839, the first survey to lay out streets and designate lots for distribution to the inhabitants of Yerba Buena was made by Captain Jean Jacques Vioget, a Swiss engineer. For years afterwards it hung on the wall of Vioget's saloon, which was the central meeting house of the community, and all real estate transactions were charted on it. It included those portions of the present city which lie between Pacific Street on the north, Sacramento Street on the south, Dupont Street on the west, and Montgomery Street on the east. The original bounds of the new town were therefore very limited.

In accordance with the Mexican law, only one lot was to be granted to each person, who, in turn, promised to pay taxes, fence in the land, and build upon it within a year. Other laws provided that land along the shore line was to be reserved for common use, and that the town was to be laid out with wide streets, large lots and public squares.

The first house - a shanty - was constructed in 1835 near the present

Grant and Clay Streets. Up to the time of the Gold Rush boom only 57 homes and 22 shanties had been erected. Except for the more primitive adobe, materials for building were lacking at Yerba Buena and had to be imported from nearby communities and from the east by shipping them around the Horn. The earliest buildings on the peninsula were single-storied, white-washed adobe with red tile roofs. This type of home recurs today in the new single family house with the white stucco facade and vari-colored tile roofs.

The village became American two days after the end of the Mexican War when the United States took over California. In the next year the name of the town was changed to San Francisco so that it might capitalize on the fame of the great bay of San Francisco.

General S. W. Kearney, the American military governor, issued a decree, granting to the town of San Francisco all the beach and water lots which had previously been reserved for common benefit, except a few of these lots designated for federal use. He also validated the titles of the lots which were in possession of the inhabitants.

Since the town was rapidly expanding with newcomers, the City Council in 1847 delegated Jasper O'Farrell to extend the early land surveys and lay out streets and additional lots for distribution. O'Farrell warned the City Council against the extension of the rectangular pattern of streets over San Francisco's sand dunes and rocky hills, but the land speculators would tolerate no other plan. As a result, excessive expenditure of public money was made to

cut streets through hills and prepare grades. O'Farrell laid out Market Street as a diagonal thoroughfare, dividing the 50 vara* lots on the north side from the 100 vara lots on the south side. The south of Market lots were never considered as valuable as those to the north, and with certain very notable exceptions, such as the Emporium, Monadnock Building, and the Palace Hotel, this is true at the present day.

The beach and water lots were sold at auction by the town in 1847. Other lots in the extended land divisions were disposed of at fixed prices at private sales. The Mexican provisions controlling distribution of land were flagrantly disregarded until finally repealed by the local council.

THE ERA OF GOLD

The discovery of gold in California, in 1848, changed the whole character of the town within a few months. San Francisco became the stopping-off place from which thousands hurried on to the mines. According to some estimates, the population grew from less than 1,000 persons in 1848 to more than 50,000 by the end of 1849.

Since the lofty hills and sand dunes hemmed in the town from the west and south, and since everyone wanted to be as close to the waterfront as possible, the first expansion of the city was by wharves built over the tidelands to the north and east. Shacks, shanties and tents provided shelter for the migrants. Building materials prices soared, and, because nearly all persons had spent their entire savings coming west, they could not afford to live in other than the flimsiest of dwellings. Six times between December 24, 1849 and June 22, 1851 great fires destroyed the entire city. It rebuilt itself each time with what Josiah Royce called *heroic good-humor*.

Once again, in 1849, the council ordered an extension of the land survey, undertaken this time by William

Eddy. Lots were laid out on paper as far west as Leavenworth Street and as far south as Eighth Street. Over 3,000 were offered for sale at auction January 3, 1850, realizing approximately \$635,000 for the city treasury. Later, the city disposed of other lots at private sales for as much as twenty times the prices obtained at the public auction.

Soon after the entry of California into the Union, in September, 1850, the State Legislature granted San Francisco a charter, incorporating under its jurisdiction all the land as far west as the present Buchanan Street and as far south as Sixteenth Street, the southwest corner of the city being the Mission Dolores Church. Both boundaries included much land beyond any street established by land surveys.

On April 15, 1851, a new charter was granted re-incorporating the city. With Portsmouth Plaza as its center, San Francisco then extended two and one-half miles south and two miles west, with the San Francisco Bay as the northern and eastern boundaries. Divisadero Street marked the western and Twenty-first Street the southern limit.

In this year began also the litigation over the Limantour Claim, one of the most fabulous frauds that was ever attempted. Limantour claimed that in exchange for \$4,000 he had been deeded by the former Mexican government 17,000 acres, an area which took in most of San Francisco, Tiburon Point, Yerba Buena Island, Alcatraz Island, and the Farallones. This litigation continued for fifteen years and seriously hindered the orderly expansion of the city.

A third charter was granted to the City of San Francisco in 1856 delineating its jurisdiction as within the boundaries of the county. This incorporated the whole peninsula as far south as a line skirting the southern extremity of Laguna de la Merced. The boundary has not been changed since this grant, except for a slight revision made in 1899 by agreement with San Mateo County. According to Langley's

* A vara is a Spanish yard, a unit of measurement of approximately 33 inches.

Directory for 1860, the area of the city was approximately 42 square miles, or 26,000 acres. 10,000 acres were suitable for cultivation, 8,000 were rocks, drifting sand and water, 6,000 were used as pasture and only 2,000 acres were occupied by the city proper. Some of the land incorporated by this Consolidation Act of 1856 is still unoccupied by the City proper. The greatest part of the gold rush was over and many of her citizens were anxious to see the city cease to be a wild frontier town. Their hopes lay in her magnificent harbor and its drydocks, wharves, warehouses, and the newly established but already flourishing business houses.

In the Fifties the expansion of the city was southward. The sand dunes that had blocked the way were dumped into the cove and tidelands, providing a firmer foundation for the permanent structures built thereon. The Hayes Valley subdivision, at the southwest extremity of the city proper, was reached at that time by the roads south of Market Street.

THE SIXTIES AND SEVENTIES TWO DECADES OF GROWTH

More than 175,000 persons came to San Francisco between 1860 and 1880, the greatest rate of growth the city has ever experienced. Most of them were Americans who migrated westward upon the completion of the trans-continental railroad, but a great number were also European and Chinese immigrants. The population of San Francisco has always been cosmopolitan. The increased population and the great congestion of the Chinese quarter caused the Board of Health to establish a quarantine system in 1864 to check the spread of *malignant or infectious diseases from the arrival of numerous . . . Chinese passengers in the city*. One of the duties of the Health Officer was to assemble mortality statistics by city wards. His reports frequently referred to the high death rates in unsanitary and bad housing areas, where the poor and the immigrants lived.

In 1866, land titles were finally settled, and 17,000 acres were ceded to San Francisco by an Act of Congress. San Francisco was now in possession of 8,400 acres outside her Charter Line of 1851. The city supervisors, with the approval of the State Legislature, handed over the title of the land to those *who were in actual possession on March 8, 1866, and had paid taxes thereof for five years next preceding July 1, 1866*. The only limitation was that no one should receive more than 160 acres.

This procedure was severely criticized by many San Franciscans who felt that the land could have been sold by the city for millions of dollars or parcelled out in smaller lots to persons eager for home sites. Undoubtedly it was an opportunity for the city to control land speculation and direct land use, a role which few American cities have undertaken.

Of the 8,400 acres of *outside lands*, only a little more than 1,000 acres were reserved for public use, of which the major part became Golden Gate Park.

With the settling of the land claims there occurred extensive buying of lots and building of dwellings. With the invention and installation of the cable cars the hills immediately to the west of the city became accessible for home building. This expansion was needed, as nearly the whole northeastern quadrant of the peninsula was now occupied by the city proper.

San Francisco did not experience industrial expansion as did other American cities in the Eighties and Nineties. Manufacture, in these decades, was far less important than commerce and finance. City growth following 1880 was slower.

Many persons acquired the habit of living in serviced hotels or apartments close to the business section. As a consequence a great number of people were employed in the services.

Individual earnings, accord-

ing to Langley's Directory for 1870, were higher than in any other American city, but rents were also higher. The craft union movement and the strong Workingmen's party helped maintain a comparatively high wage standard.

In 1890 the developed area of the city extended over 8,000 acres. Settlement was scattered westward in a long narrow strip several miles from the densely populated region. The city also extended southward along the principal lines of travel.

The turn of the century was marked by the founding of many private relief societies, reform groups and neighborhood centers. The new charter, granted by the State in 1900, was evidence of growing public interest in civic affairs. There was likewise a belated growth of pride in the appearance of the city. One improvement group engaged the famous Daniel H. Burnham to design the future city. His plan recommending drastic changes in street layout and a scheme of Greek and Roman architecture, was considered premature for a city such as San Francisco. Nevertheless, a few of Burnham's ideas have since been carried out, notably the general plan of the present Civic Center.

EARTHQUAKE, FIRE and AFTER EFFECTS

The great earthquake and fire of 1906 was a test of San Francisco's endurance. It destroyed the homes of half the population as well as the entire business section of the City. San Francisco faced a tremendous problem of supplying emergency relief and shelter for its families. With the help of national relief organizations, immediate needs were filled and the city turned to rebuilding. One group called Burnham back to San Francisco with the hope that his plan to revise the street layout could be executed. However, there was general fear that any change in street plan would retard rebuilding in the city and so the Burnham plan was abandoned. All efforts were directed toward re-establishing the city to its former commercial importance. As a consequence,

the majority of residential structures were built rapidly and with little or no concern for building laws.

The pattern and location of residential communities were affected by the great fire. The city growth along traveled routes leading from the business area was enlarged, increasing the density of population in the area immediately surrounding the burned portion. These movements encouraged the growth and establishment of outlying business districts. In the burned area, both business and industry crowded in where residential uses had formerly predominated.

The old habit of families living downtown was partially broken. The new apartments, replacing the homes of the wealthy, housed a different type of population—one which was less fashionable, less neighborly and more transient.

The problem of housing families evicted by the fire and the poor quality of the houses and accommodations that had been rapidly constructed after the fire aroused many social agencies to act jointly. These agencies formed the San Francisco Housing Association, whose purpose was to foster housing legislation and to educate the public to the need for building regulations.

Through the Association's efforts, a new state building law was passed in 1909. When enforcement of this law was lax in San Francisco individual members of the Association endeavored to bring the violations to public attention. However, the Tenement House Inspection Division of the Health Department was always under-staffed and could not cope with increasing disregard for the building law. The Housing Association investigated housing conditions in various districts of the city, and concluded that San Francisco's housing was in as bad state as the housing of other large cities in the East, and that public action was imperative to keep the situation from becoming worse.

Bad housing was not new in San Francisco, however. The Health Department reports for three decades had

pointed in vain to deplorable health and housing conditions. In a report to the Commonwealth Club of California by its Section on Social Welfare, in 1907, the following conditions were said to have been prevalent in many districts before the Fire:

1. Overcrowding.
2. The sheltering of livestock in buildings used for living purposes.
3. Buildings covering too large a percentage of the lot.
4. Lack of sufficient light and ventilation, and, frequently, at least one room without a window.
5. Insufficient supply of toilets and general unsanitary arrangements.
6. Filthy yards, basements and cellars.
7. No play space for children.

Continued activity on the part of the San Francisco Housing Association achieved in 1917 the establishment of the State Commission of Immigration and Housing and the passage of an improved State Tenement House Act.

CHINATOWN

There are no official records of the arrival of the first Chinese in San Francisco, but historical documents refer to a party of two men and one woman, who arrived from Hongkong in February, 1848. They settled, as did those who followed them, near Portsmouth Square, close to what was then the waterfront. Their settlement was near to the center of town and yet far enough away to permit a separate cultural life.

By 1860 the Chinese population in San Francisco was in excess of 3,000. Most of these were Cantonese, who had set sail in the early '50's to seek work in the *Golden Hills*; others had been recruited at Hongkong by American contractors. But this decade of immigration was negligible when compared with the number of Chinese laborers imported to work on the Central Pacific Railroad between the years of 1865-69. It was estimated by the officials of the Central Pacific Railroad that they numbered be-

tween 10,000 and 12,000, about 80 percent of their total labor.

The present deplorable housing conditions in Chinatown are the outgrowth of historical events in this community. Apparently many of the early Chinese had no intentions of establishing a permanent residence in San Francisco. Their sole ambition at that time was to make a fortune by hard work, then return to China to spend their dying days. This may be the reason that Chinese did not own much real estate within the city during the *Eighties*.

Crowded conditions were apparently as serious in 1870 as they are today. Quoting from *Historical Abstracts of San Francisco* by Oscar T. Schucks:—"Forty-five Chinamen found sleeping in one room were arrested on a charge of violating health laws" - May 20, 1873. "Chinatown was condemned as a nuisance by the Board of Health. The condemned district was bounded by Stockton, Kearny, California and Broadway Streets" - February 21, 1880.

The municipal investigation in 1885 by a special committee of the Board of Supervisors revealed 14,522 bunks for sleeping in 10 blocks in Chinatown.

With the Chinese Exclusion Act of 1882 the housing problem of Chinese took on a new nature. Early housing was a makeshift, a temporary adaptation of buildings to accommodate single men. Arrival of wives and children of Chinese residents created the problem of providing homes for families and establishing permanent residences. Eight or ten single persons might tolerate living temporarily in a single room, but families desired at least a room to themselves. The housing problem was aggravated further by residential restrictions which prevented expansion.

After the fire which destroyed all of Chinatown, efforts were made to obtain this area, valuable as it is in location, for business purposes. The Chinese, however, refused to abandon this site, and won the right to rebuild upon the location they had occupied since the Gold Rush. The familiar, color-

ful wooden structures which had gone up in the conflagration were replaced by more substantial buildings, since it was now unlawful to erect wooden buildings east of Powell Street. A modern sewer system was installed and cesspools disappeared from the community. But the buildings had to be put up rapidly in order to rehouse the homeless population and consequently this housing was of a low standard.

At the present time the family population of Chinatown is continuing to increase and the single men population dying out. The depression of the 30's brought a large number of Chinese families into Chinatown from the rural areas. There is also continued admittance to this country of Chinese born children whose fathers have decided to remain here permanently.

In summary, the historical causes for bad housing in Chinatown are:

- (a) Preponderance of single men, who have little desire to improve their living quarters.
- (b) The growth of family population.
- (c) Residential restrictions and racial discrimination by the property owners' protective associations.
- (d) Geographic limitations caused by Nob Hill on the West, financial district to the East, downtown commercial area to the South and the Latin quarter on the North.
- (e) The fire of 1906, followed by a method of building which disregarded health codes.
- (f) Lack of sanitary facilities in the tenement buildings.

AFTER THE WAR

San Francisco happened to have a housing shortage in 1920-21 analogous to that which occurred all over the nation. Very little construction had occurred during the war because of the war industry's need for labor and materials. In 1918 the number of building permits granted in San Francisco was only one-third the average of the pre-war period.

An investigation of the housing shortage was made by the Commission of Immigration and Housing, which recommended that legislation be passed to provide the means of assisting the man of small income to buy his home, making the initial payment small and permitting him to make payments over a long period of time. This recommendation was disregarded.

In 1921, however, the California Farm and Home Purchase Act was passed by the State Legislature, which provided for loans at low interest to enable war veterans to purchase homes already built. From the inception of this Act to December, 1939, 2,693 homes in San Francisco have been purchased by veterans.

One of the principal reasons why housing loan legislation was not pressed further at this time was that recovery was soon made in building construction. A new peak of home building was reached in 1925. After that time there was a gradual decline until the depression of the Thirties, when building activity came to a virtual standstill.

Improved transportation aided in creating and expanding outlying residential districts. Streetcar lines were extended to the Richmond, Potrero, North Beach and Sunset districts between 1912 and 1919. The Duboce and Twin Peaks tunnel lines contributed greatly to the settlement of the area beyond the Mission hills. Consequently the population increased in the Richmond and Sunset districts from 51,564 in 1910 to 83,176 in 1920 and 134,967 in 1930.

The first zoning ordinance was passed in San Francisco in 1921 and since that time much attention has been given to investigating zoning petitions, widening of streets, and controlling the height of buildings.

A City Planning Commission was provided for by State law as early as 1915, but since responsibility of city lay-out was divided among many city agencies, the Commission had very little power. A Master Plan, provided for by the Charter of 1932 to eliminate this confusion, has not been attempted. To con-

tinue to ignore the necessity of adequate planning will promote further physical decay and increase the trend of population out of the city.

As will be noted from the population table in the following text, San Francisco had its greatest rate of growth in the early decades of its history. Since immigration from foreign countries has been restricted, the main source of population increase has been through migration from eastern states, but there has been a simultaneous migration from San Francisco to other communities in the Bay Region, a movement stimulated by the new bridges. Thus, while the population in the Bay Region continues to increase, it has ceased to increase in San Francisco. The opportunity to build homes on desirable vacant

land within the city is near exhaustion. Remaining sites are more expensive and less attractive than available subdivisions on the peninsula below the city, across the Bay or across the Golden Gate in Marin County.

This survey seems to have been made at a time when San Francisco has become a mature city. Its growth was rapid and uncontrolled but the population trend has leveled off. Planning in San Francisco has been limited. Decay in residences, uncontrolled land speculation, transportation problems and other influencing factors emphasize the need for a comprehensive plan for the future. San Francisco is not going to be a bigger city; it can be made a better city.

REAL PROPERTY SURVEY

San Francisco is the hub of a great metropolitan area; a center of commerce, industry and social and cultural activities. A topographical description of the city emphasizes its many steep hillsides, its low land along the bay and its large extent of sand dunes near the ocean. This topography has had great influence on the type of construction, the formation of communities, and the location of industry and commerce. At the present time, there is extreme congestion throughout the greatest part of the city along with several barren peaks which are not, as yet, worthy of investment. Only in recent years has the great expanse of shifting sand dunes been subject to a boom of speculative construction.

The 635,536 residents of the city live principally in row houses, apartments and residential hotels. With-

in the corporate boundary of the city and county there are 110,008 substantial permanent structures, and all but 9,935 contain residential dwelling units. More than half of the commercial structures - including hotels, garages and office buildings - are concentrated in the area bounded by Van Ness Avenue, 17th Street and the bay, which is the oldest section of the city. Here, also, are most of the apartment houses and the combination commercial and residential structures.

As is logical, the industrial enterprises of the city border the shores of the bay from Fort Mason on the north to Hunters Point drydock on the southeast. The three census areas bounded by this shore line, A, K and L, contain 85.1 percent of the industrial structures.

Throughout the rest of the city, residential structures predominate.

BLOCK USE

The survey data has been prepared for 4,482 blocks referred to as RPS blocks. Of this total, 236, located mainly in the southern and western areas of the city were entirely vacant. Another 437 blocks are occupied entirely by commercial, industrial, public or institutional buildings. Over three-fourths of these are located in the three areas predominantly commercial or industrial in nature (A, K and L). The remaining blocks, 3,810, contained one or more residential dwelling units. In the sparsely settled areas of the city are 114 blocks bounding only one or two dwelling units. The remainder, 3,696, warrant consideration as definite residential blocks.

There are 7,000 dedicated city blocks, but this survey combined the areas not bounded by existing streets or other definite boundaries. When these areas were too large to warrant identity as a whole, they were divided into areas somewhat more homogeneous in character.

POPULATION

From 1930 to 1940 the population of San Francisco remained static. Before that every census had shown at least a 20 percent increase. The Real Property Survey of 1939 reveals a residential population of 610,306 persons, including 27,196 in residential hotels. The census of 1940 shows a total popula-

tion of 634,536. It is assumed, therefore, that approximately 24,000 people are living in other than residential units - in hotels, clubs, *flophouses*, institutions or on military reservations; although places of habitation they were not included in the scope of the survey.

More than 300 homes, practically all located in the communities west of Twin Peaks, Mt. Davidson and Balboa Park, are being constructed each month, a housing boom that has continued for the past fifteen to eighteen months. A comparison of the population figures (1930-1940) would indicate that the bulk of the increase in population in census areas O, P and Q are coming from areas A and B.

This migration from apartment houses to single family homes is possibly creating additional vacancies which, if not supplanted by a population moving into these areas, either from other sections of the city or from outside the city, will create a serious problem of depreciating real estate values.

TYPES OF STRUCTURES

There are five distinct types of residential structure in San Francisco - the single-family detached house, the single-family row house, the flat, the apartment and the converted structure.

settled outer Mission area (M), there are a number of houses now classified as detached which, presumably, will later on become row houses when residences are erected on the intervening vacant lots.

Apartment buildings are confined almost exclusively to the eastern half of the city, the largest ones being in the central district (A).

Over half of the converted structures are located in the two oldest areas of the city, Western Addition and the Mission. Both of these areas escaped the great fire of 1906. At that time, the need for housing accommodations

P,Q	9.1	8.4	15.2	1.6	0.4	2.0	2.7

Nearly half of the residential structures are row houses. These homes, practically all built on twenty-five-foot lots, are structurally independent of each other but attached usually at the edge of the facade. There are a few however, built before 1922, that are actually attached and have common side walls (party walls).

The detached single-family house - so classified when there is at least three feet of space on all sides of the structure - is the next most predominant type of structure. Most of these houses are found in the better planned subdivisions - Sea Cliff and St. Francis Woods, for example. In the sparsely

encouraged the subdivision of large homes and flats to accommodate single persons and families in light housekeeping rooms. Converted structures are, for the most part, substandard, providing poor living conditions, such as common use of toilet and bath by several families, cooking in bedrooms, rooms lacking light and air, and other insanitary and unhealthful facilities.

APARTMENTS

EXTERIOR MATERIAL

The main exterior material used in residential structures is wood. Four out of five residential structures are built of this material. Except for a few apartments of brick and concrete, the rest of the residences have exteriors of stucco. Many wooden residences, especially the row houses, have stucco

facades. Detached houses use stucco as their principal exterior material more frequently than do row houses. In the Parkside and St. Francis Woods residential areas nearly half of the homes are of stucco.

TABLE 6: PERCENT OF STRUCTURES WITH EXTERIOR MATERIAL OF WOOD BY TYPE AND BY CONDITION OF STRUCTURE

TYPE OF STRUCTURE	CONDITION			
	All Structures	Good	Fair	Poor
Total	81.0	71.1	88.4	96.4*

L	100.0	89.3	10.0	0.3	0.4
M	100.0	88.3	11.2	0.1	0.4
N	100.0	91.0	8.1	0.4	0.5
O	100.0	56.2	43.0	0.5	0.3
P,Q	100.0	81.3	18.3	0.2	0.2

Almost all the buildings in need of major repairs were wood, while only three out of four of those in good condition were that material. This indicates that wooden structures have been given the least amount of repair and stucco the most.

HEIGHT AND SIZE

Most of San Francisco's residential structures are one story high. The few apartment houses that are more than three and one-half stories high are in commercial areas where expensive land has warranted the construction of tall buildings.

In the same area are also the apartments with the greatest number of units. Smaller apartment houses are found in the poor residential census areas L and M.

CONDITION

There is no direct correlation between the condition of a structure and its age. Reference to map numbers 8 and 9 in Volume II most clearly depicts this fact.

The few residences in the industrial section of the city (census area K) have not been kept in good state of repair, although the structures were all built since the fire of 1906. 55.1 percent of them need structural repairs or are no longer fit for occupancy, and

TABLE 8: PERCENTAGE DISTRIBUTION OF CONDITION OF STRUCTURE BY CENSUS AREA

CENSUS AREA	CONDITION OF STRUCTURE			
	ALL	Good	Fair	Poor
Total	100.0	48.1	40.6	11.3
A	100.0	20.1	62.3	17.6
B	100.0	58.0	36.2	5.8
D, H	100.0	72.2	24.8	3.0
E, G	100.0	86.8	12.3	0.9
J	100.0	20.2	61.7	18.1
K	100.0	4.4	40.5	55.1
L	100.0	22.1	54.1	23.8
M	100.0	38.6	50.2	11.2
N	100.0	22.1	58.6	19.3
O	100.0	76.2	21.6	2.2
P, Q	100.0	83.9	13.6	2.5

nearly all need some repairs. In no other area of the city is this situation so acute. In the Hayes Valley-Western Addition section most of the structures need minor repairs.

San Francisco exhibits more variations within census tracts than do most cities. It is not unusual to find blocks whose structures are in good condition next to blocks whose structures are in poor condition.

TABLE 9: PERCENT OF STRUCTURES IN GOOD CONDITION CLASSIFIED BY TYPE AND OCCUPANCY

TYPE OF STRUCTURE	ALL	OWNER OCCUPIED
Total	48.1	56.1
Single Family:		
Detached	56.2	63.2*
Row	56.2	61.3
Flat	39.2	44.9
Apartment	37.3	43.9
Converted	20.3	27.2
Other	27.5	33.9

* Example: 63.2% of the Owner Occupied Single Family Detached structures are in "Good Condition".

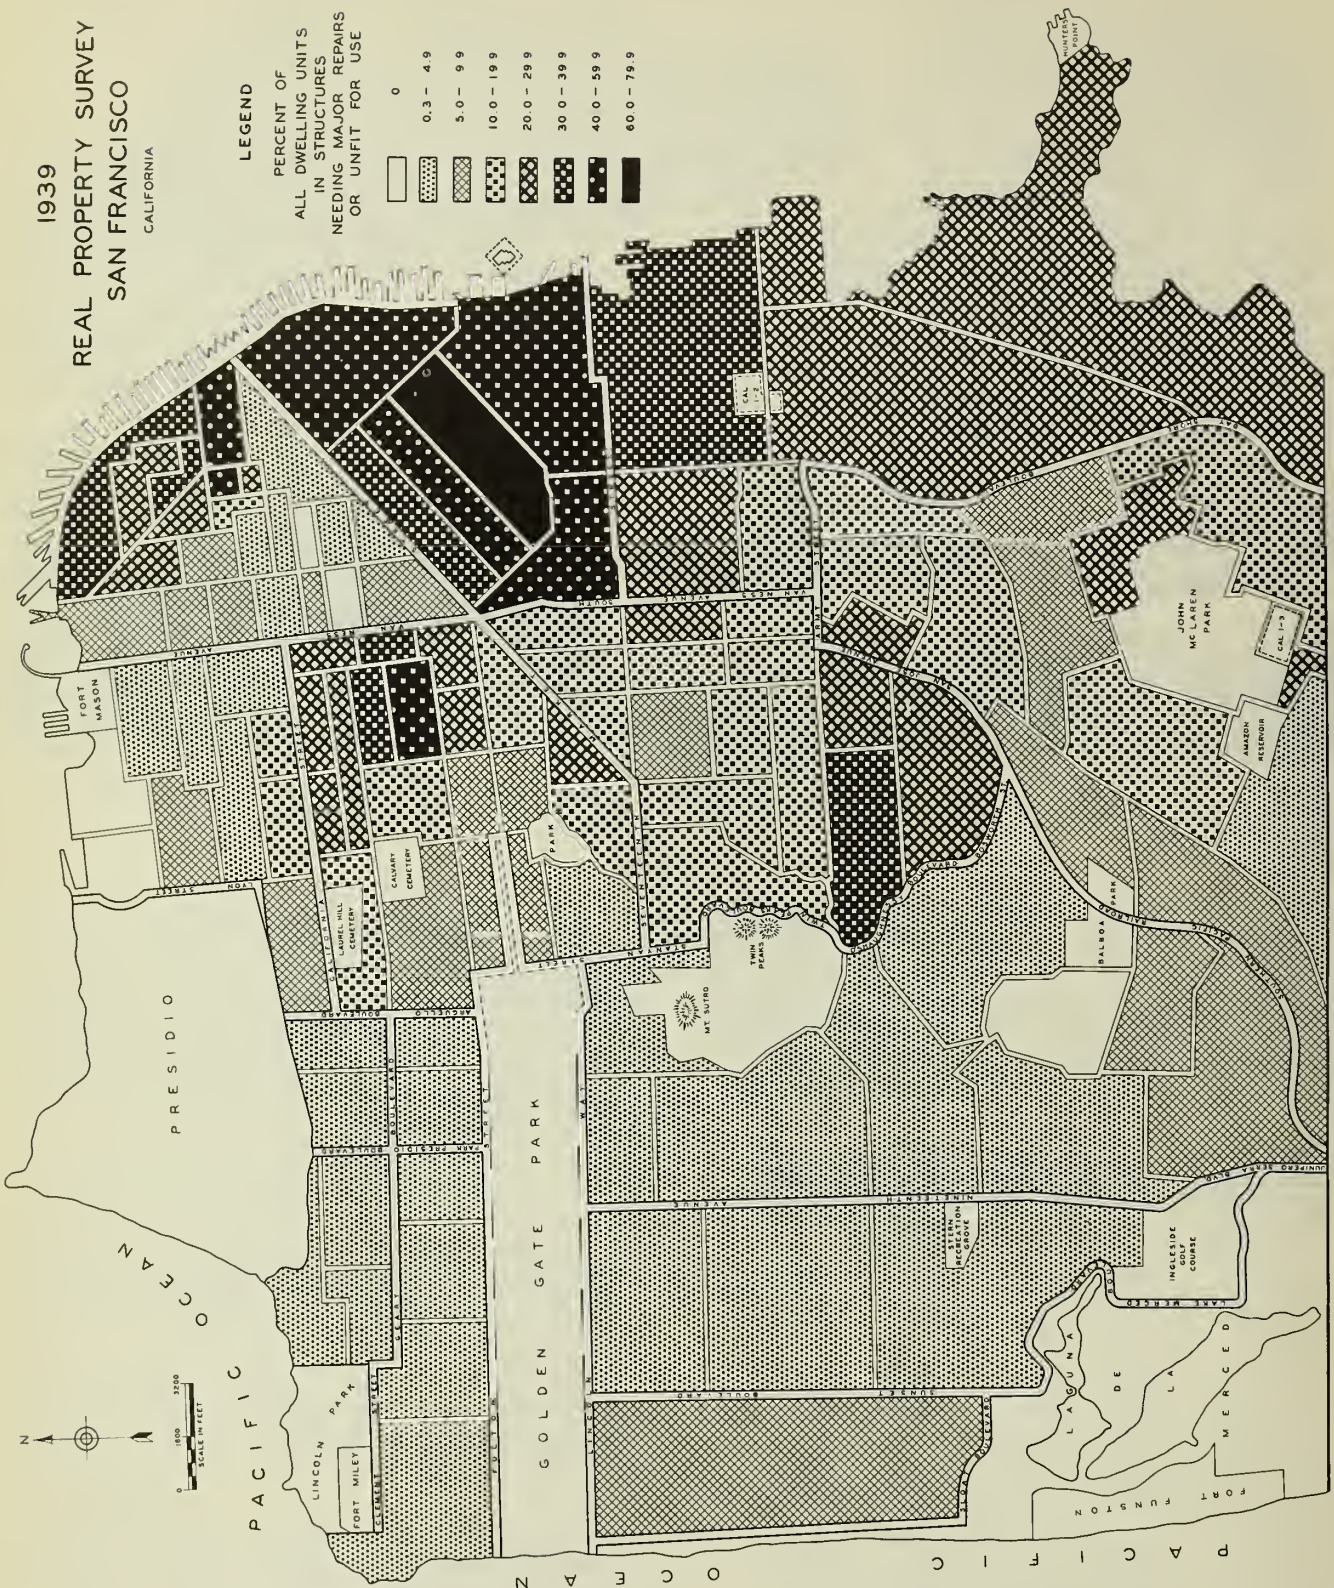

Single-family homes, both detached and row houses, are in much better condition than other types of residential structures. Over half of the single-family homes need no repairs whatsoever; less than one-tenth of them are in need of structural repairs or unfit for occupancy.

Half of the flats and apartments are in fair condition, needing only minor repairs, such as painting, plastering or replacement of cracked and broken windows. Structures that have been converted for use are the poorest structures in the city. Four out of every five are in need of repair, many of these being in such bad condition that they will soon be unfit for occupancy.

Owner occupied structures are in better condition than those with absentee ownership. This would tend to indicate that investment producing properties are more profitable if not kept in good condition.

LEGEND

PERCENT OF
ALL DWELLING UNITS
IN STRUCTURES
NEEDING MAJOR REPAIRS
OR UNFIT FOR USE

CONDITION OF RESIDENTIAL STRUCTURES

MAP NUMBER - I

AGE OF STRUCTURE

MAP NUMBER - 2

AGE

Half of the residential structures are more than twenty-five years old. Even though several thousand structures were destroyed during the fire of 1906, 21.8 percent of those existing today were constructed before the fire. The ten-year period following the fire was naturally one of great building activity, though not so great as was the boom during the '20's.

TABLE 10: MEDIAN AGE OF RESIDENTIAL STRUCTURES BY CONDITION AND OCCUPANCY

Condition of Structure	OWNERSHIP STATUS		
	TOTAL	Owner Occupied	Absentee Ownership
Total	1915	1920	1911
Good	1925	1925	1923
Fair	1910	1911	1908
Poor	1904	1905	1903

The structures in good condition are considerably newer than those in poor condition. Tenants, as a rule, live in older and poorer structures than do owners. The median age of structures occupied by the owner, either as a resident or landlord is twenty years; those not occupied by owners are nearly nine years older.

TABLE 11: MEDIAN AGE OF RESIDENTIAL STRUCTURES BY CENSUS AREA

CENSUS AREA	MEDIAN AGE

K	1910
L	1909
M	1920
N	1907
O	1925
P,Q	1928

Transportation difficulties confined most of the early residential construction to the easterly half of the city. Improvement of transportation facilities has accelerated the development of the western and southern parts of the county.

OWNER OCCUPANCY

Rental properties are mainly multi-family structures. Owners are present in one-half of the flats and converted structures. These structures are maintained in better condition than are structures under absentee ownership. Three out of four single-family homes are owner occupied.

TABLE 12: NUMBER OF OWNER OCCUPIED STRUCTURES AND PERCENT OF TOTAL

Type of Structure	Number	Percent of Total
Total	65,692	65.0
Single Family:		
Detached	15,239	74.0
Row	33,804	74.9
Flat	8,829	51.9
Apartment	1,661	31.9
Converted	4,006	50.0
Other	2,153	42.5

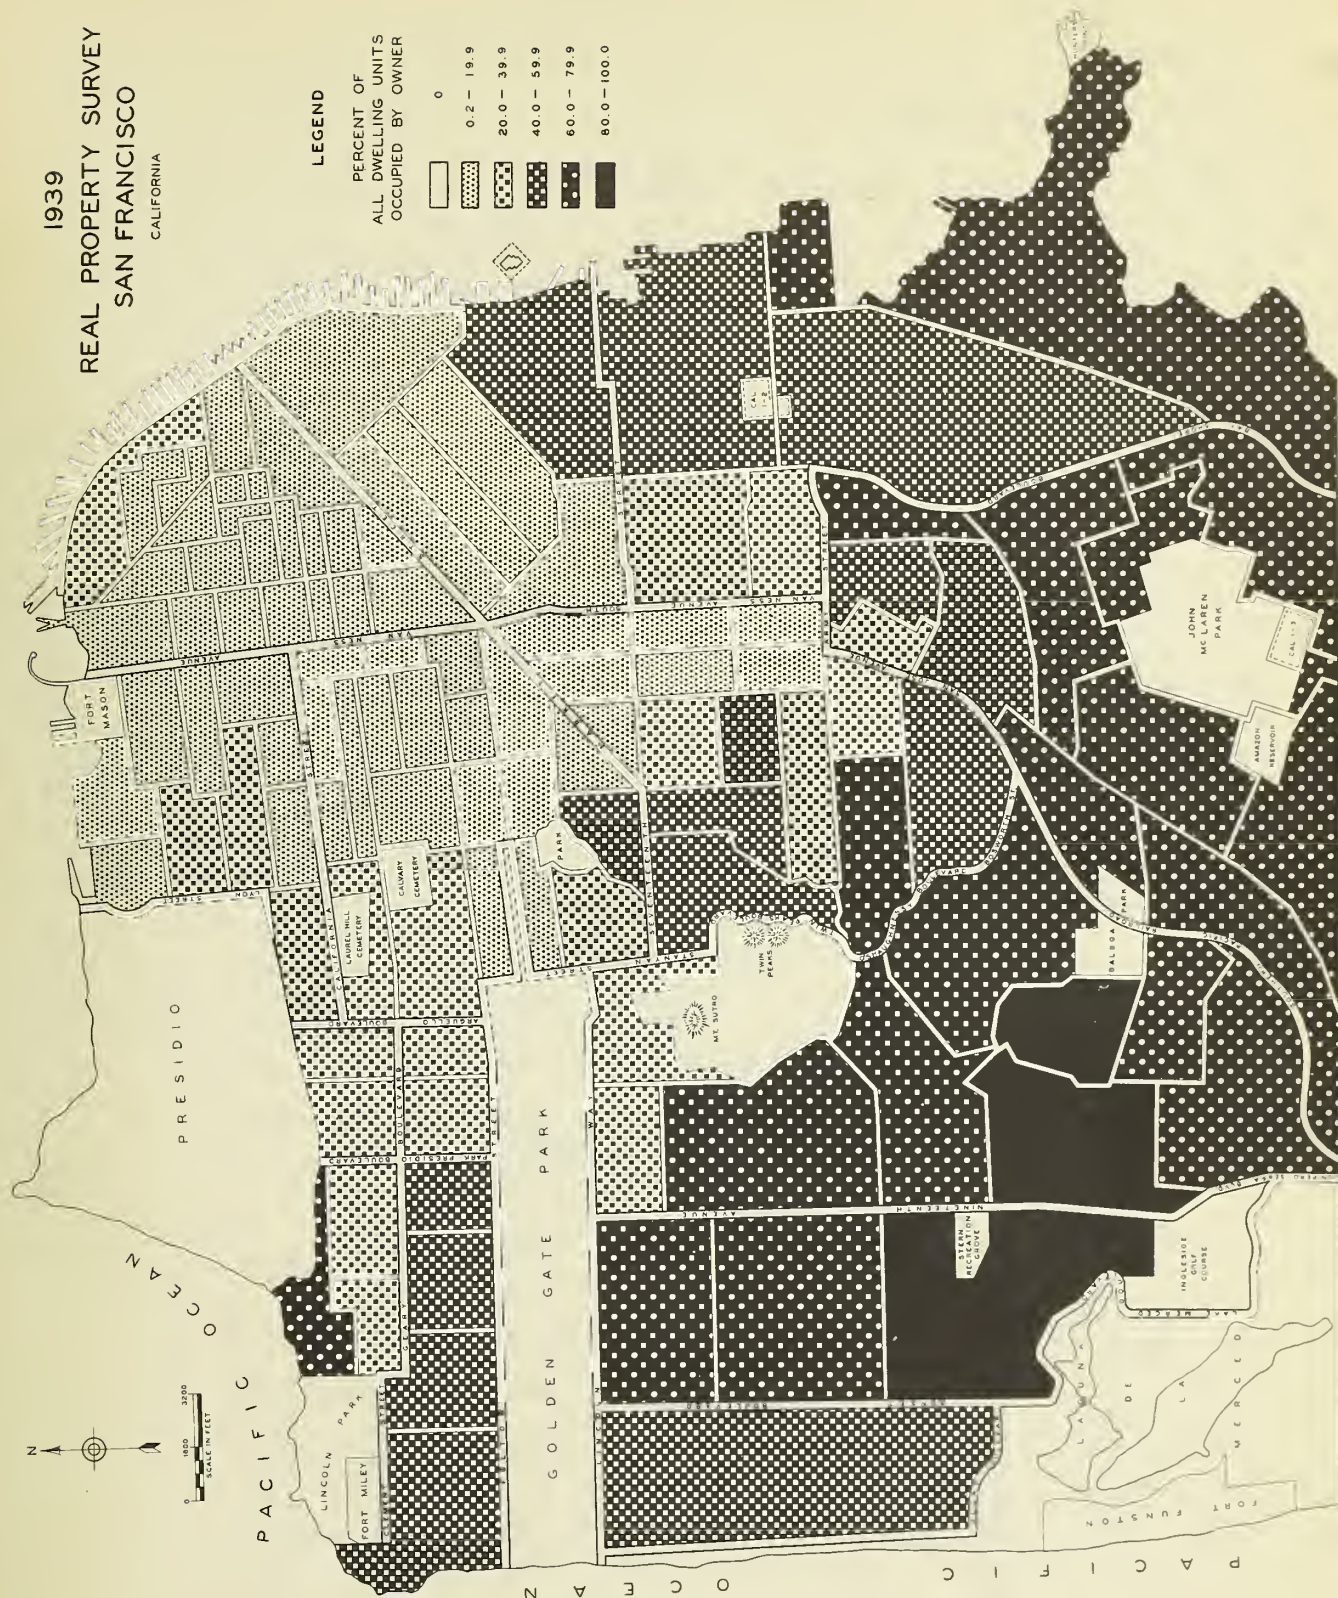

Except for a very few, homes range in value from \$1,000 to \$29,000 (Land and building, see Definitions). Half of the homes, however, are worth less than \$5,300. The highest values of the single-family home exist in the Marina and Pacific Heights sections (census areas B and C); the lowest values are in census area K, an industrial area.

Values and rentals of single-family homes vary in direct ratio.

1939 REAL PROPERTY SURVEY SAN FRANCISCO CALIFORNIA

DWELLING UNITS

TYPE AND LOCATION

There are more dwelling units in the Western Addition district (J) than in any other established census area. Two-thirds of the homes in this district are apartments and homes in converted structures. The central (A) district, which includes the major commercial section of the city and a few industrial plants, as well as the highly congested Chinatown area, has nearly one-fifth of all the dwelling units in the city, 70 percent of them in apartments. This is the principal apartment house district. The industrial area of the city, (K) bounded by Market, Van Ness, and 17th Streets, contains 4,571 dwelling units, practically all of a multi-family type, interspersed among the factories. This blighted area does not hold any bright hope for the future for the present residents, and its continued existence will not add to San Francisco's respectability. It is in this area where the flop houses are most numerous.

RENTALS

The median rental of all tenant occupied and vacant dwelling units in San Francisco is \$31.50. There is considerable variation in average rent among the various types of residential structures as well as among the various census areas of the city. Single-family row houses and apartments command a higher rental than the single-family detached home, the flat, or the small units in converted structures. The concentration of rentals around the median is similar for each type of structure except the single-family detached home. The rentals of 50 percent of the units differ by less than \$18, regardless of size or location. This leveling off of the rental quality of dwelling units contrasts with the wide spread in rentals of the single-family detached income producing property, where there is a spread between \$20 and \$50 per month for the middle 50 percent of the units.

Areas of bad housing have the lowest rentals. In the better planned communities and in the areas with building restrictions, rentals as well as property values are considerably higher.

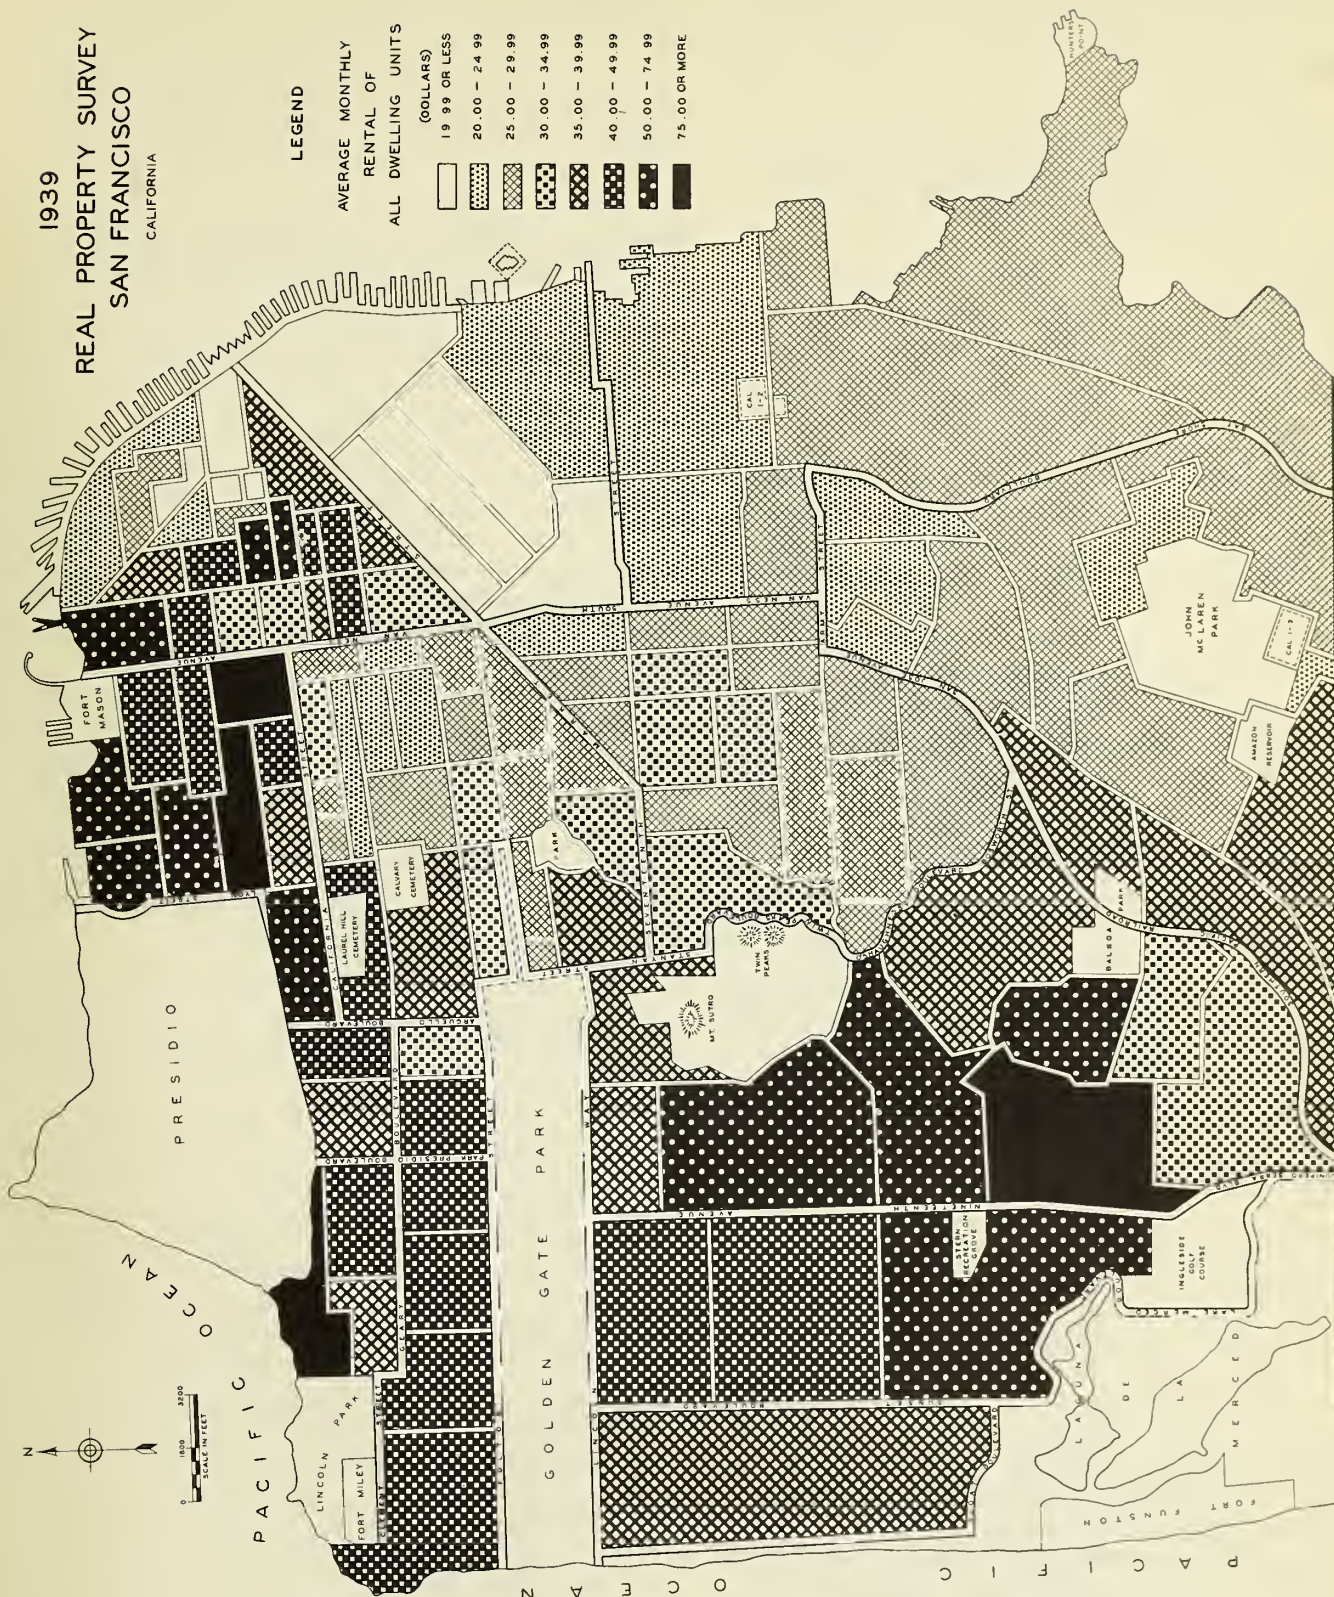

TABLE 14: PERCENTAGE DISTRIBUTION OF CENSUS AREA OF DWELLING UNITS BY TYPE OF STRUCTURE

CENSUS AREA	TYPE OF STRUCTURE

1939 REAL PROPERTY SURVEY SAN FRANCISCO CALIFORNIA

LEGEND

AVERAGE MONTHLY RENTAL OF ALL DWELLING UNITS (DOLLARS)
19.99 OR LESS
20.00 - 24.99
25.00 - 29.99
30.00 - 34.99
35.00 - 39.99
40.00 - 49.99
50.00 - 74.99
75.00 OR MORE

AVERAGE RENTAL

In most communities of the city, tenants of single-family homes pay higher rents than do tenants of other residential types, a difference which is greater in the areas of better housing than in the poor communities.

TABLE 15: QUARTILE AND MEDIAN RENTAL OF TENANT AND VACANT DWELLING UNITS BY TYPE OF STRUCTURE

TYPE OF STRUCTURE	LOWER QUARTILE	MEDIAN QUARTILE	UPPER QUARTILE
Total	\$22.59	\$31.50	\$41.44
Single Family:			
Detached	20.83	29.53	49.58
Row	28.09	34.67	44.63
Flat	25.07	31.83	41.82
Apartment	29.13	36.17	46.76
Converted	12.60	20.49	27.61
Other	21.99	28.34	36.29

The rental of vacant single family homes is \$12 per month more than the rental being paid (\$32.98) for the occupied units. However, vacant units in flats and converted structures, where presumably there is less to choose from and a minimum spread of rentals, are valued at the same rental as occupied units.

TABLE 16: MEDIAN RENTAL OF TENANT AND VACANT DWELLING UNITS BY NUMBER OF ROOMS AND BY ADEQUACY

NUMBER OF ROOMS	ADEQUACY	
	Standard	Substandard
1	\$30.51	\$11.95
2	34.79	17.45
3	36.44	20.87
4	31.71	21.67
5	34.69	25.30
6 or more	44.64	29.21

The rental for substandard dwelling units, \$18.47, is considerably less than units in the standard classification, \$32.64. Both vary according to the number of rooms. In the standard dwellings one room units command two-thirds as much rent as units of six or more rooms, in the substandard dwellings one room units command only one-third the rental.

FACILITIES

Four principal facilities are necessary in every dwelling unit - effective lighting, heating, cooking and refrigeration. Probably the most important - lighting with electricity - is found in nearly all homes in the city. Almost as many families use gas for cooking. There are, however, nearly 5,000 families using electricity, kerosene or some other fuel to cook, and approximately the same number of units are without any cooking facilities. Nearly one out of every five units (48,498) have no installed heating facilities and must either depend on some portable unit for heat or do without. As the San Francisco climate is cool, refrigeration has never been absolutely necessary to keep foods in the home for short periods. Many structures throughout the city are so built that a small cabinet termed *cooler* has been installed either in the kitchen or on the service porch to provide, if well ventilated, semi-refrigeration of foods. The presence of the coolers and the consistent moderate temperature in this vicinity account for nearly half of the dwelling units not being equipped with some sort of refrigeration equipment.

MEDIAN DURATION OF OCCUPANCY AND VACANCY

Half of the owners of the structures in which they now live have resided in their homes for 12 or more years. Half of the tenants, however, have lived in their present homes 2 years or less. This average varies considerably with the districts and is somewhat affected by the recency of the new residential developments as well as by the loss of stability in other residential communities. In census areas D and H, an old established residential section of the Richmond district, half of the owners have resided in their homes at least 15 years. In the recently developed areas south of Golden Gate Park, the average duration of the owner-occupied structures is considerably less than 10 years. The average duration of tenancy in these districts is similar.

The vacant units in the city, most of which are awaiting occupancy by a tenant, average more than 2 months vacancy. This period is shorter in the apartment house area and considerably longer in the areas of single-family homes or flats of a less desirable character.

ROOMS AND PERSONS

The median size dwelling unit in San Francisco is approximately four rooms. This varies among the several census areas, the smaller size units being in Areas A, J and K, and the large units in the communities of single-family type residences.

Although one of every four units in the city is small - containing one or two rooms - there is a very low degree of overcrowding. Only 3.5 percent

of the dwelling units occupied by owners and 8.2 percent of those occupied by tenants contain more than one person per room. This lack of crowding is to be expected in this city where there are so many single persons and small family groups. Including residential hotels, over half of the occupied dwelling units have only one or two persons living in them.

The family size is an important factor when interpreting past events associated with housing, or when planning for the future.

CHILDREN

Only one out of four families in the entire city contains children under sixteen years of age. The absence of children varies considerably with the type of home occupied by the family. Apartments and converted structures have comparatively few children in the families they shelter. Less than one in eight of all the occupied apartments and only one of every five units (mainly light-housekeeping rooms) in converted structures contain families with children. Even in single-family homes there are few children, almost two-thirds being inhabited solely by adults.

Little difference is found in the family composition in apartments and converted structures. In the single-family homes less than one-third of the home owners have children, while nearly half of the tenant families have one or more children. The predominance of children in tenant families occupying single homes is to be expected, since management policies of investment properties, particularly apartments, do

not permit children to live in these buildings. This policy is defensible from the investment point of view, since children when living in surroundings which do not permit adequate recreation or entertainment become unconsciously destructive of surrounding properties.

Present inadequate accommodations for families will continue to influence their emigration into suburbs. To avoid a serious problem of rehabilitation of residential areas in the not too distant future, adequate, safe and properly supervised recreation facilities must be provided as one of the incentives for families to want to live in San Francisco.

RACE

Races other than white comprise less than one family of every twenty. There are more than three times as many Chinese as Negro occupied dwelling units, with the miscellaneous races of Japanese, Mexican, etc., as a group totaling twice the number of Negroes. Almost all Negro families live in the census areas A, J and K. Their homes are in poor condition and more congested than homes occupied by white families. The Chinese are confined almost entirely to the Chinatown section of the city. The extreme congestion in this section and the squalor associated with it make Chinatown San Francisco's main slum area. A few Chinese are living in the industrial area south of Market, and a few in the vicinity of Hunter's Point. The other races are scattered throughout almost all sections of the city, with a slight concentration in census tracts J-2, 3, 4, 6, and 8 - a blighted community. If blighted conditions con-

tinue to envelope adjoining areas, these lesser privileged families will no doubt migrate into them.

SUBSTANDARD

Practically all the substandard homes are in the eastern half of San Francisco. This area was built upon much earlier and contains a greater portion of the poorly constructed and ill-designed homes and multi-family structures. Over half of the substandard dwelling units are located in three distinct sections - Chinatown, South of Market, and the eastern half of census area J.

In Chinatown, 3,707 of the dwelling units - most of which are cubicles - are substandard while only 1,072 units in this area are considered satisfactory by survey standards. (See Definitions)

The industrial and commercial area south of Market Street, contains housing nearly as bad as Chinatown. The presence of factories, laundries, railroad yards, ship-building plants and the like adds to the physical deficiencies of the structures in this area.

The large substandard area in the J district is characterized by its large number of light housekeeping units and rooming houses. Over half of the structures have been converted to house additional families. One out of every twenty families in this community has one or more roomers in the dwelling unit.

Substandard structures in the southern part of the city are characterized by their poor construction, many being built by the owner with very little financial aid.

Less than 4 percent of the total substandard units are located in the western half of the city. The concentration of poor housing in the eastern half of the city and particularly in the three above-mentioned areas, indicates the considerable need for rehabilitation of housing, all the way from the bay on the north to the county line on the south.

*Example: 22.6% of all dwelling units in Census Area A are substandard

The classification of dwellings as substandard is based mainly upon their menace to the occupants, a menace either to their health or to their safety. Most substandard units endanger both.

One of the most important substandard factors, then, is the absence of private toilet, bath, and running water. The sharing of toilets and baths with other persons is, of course, not only undesirable but conducive to contagion. The majority of the substandard dwelling units are so classified for this reason.

In the Chinatown and South of Market slums few dwellings have sanitary facilities. Scattered throughout the rest of the city, there are a few blocks with a notable lack of sanitary facilities.

Structures which are in need of major repairs are, by their obvious lack of physical safety, substandard. These structures, in most instances, also lack adequate sanitary facilities.

There are 484 dwelling units in the city located in cellars (See Definitions). These units, by reason of their location, do not obtain sufficient light and ventilation. There are also 548 units of which some of the rooms used for living purposes are in the cellar and some are above cellar level. These are not classified as substandard, for such units if situated on a hillside might obtain adequate light and air. They exist, however, in violation of housing laws.

The enumerators found 589 dwelling units in the city in which the people occupied rooms without windows. This gross violation of laws was easily determined by available survey methods. Not discovered, however, were the many hundreds of units where the rooms contain windows which are useless, either because they do not open to give ventilation or because they are so close to adjoining building walls that little if any light comes into the room.

It is also illegal to have cooking facilities in rooms used for sleeping. This condition was admitted by the occupants of 5,587 dwelling units, principally in structures converted for light housekeeping purposes. Many of the occupants of these rooms cook on gas plates connected with rubber hose - an unsafe appliance.

Few dwelling units in San Francisco are crowded or overcrowded. Only 6.2 percent of all the occupied units had more than one person per room used for living purposes, very few were crowded to the extent of having more than two persons per room. As is to be expected, crowded conditions exist in the poorer structures.

The classification of dwellings as substandard, then, is based upon the presence or absence of factors directly associated with health and safety. As many of these factors are illegal, it may be assumed that landlords withheld such information frequently and that the totals presented here are understatements rather than exaggerations.

RESIDENTIAL HOTELS

In most large cities single men and single women live in rooming and lodging houses, in apartments, and in what may be called hotel apartments. In San Francisco they live, to a great extent, in residential hotels – that is to say, in structures having a hotel license but nevertheless catering to residents who rent rooms by the week or month rather than by the day, on a permanent rather than transient basis. Of the 747 hotel structures in San Francisco approximately two-thirds (499) were found to be predominantly residential rather than transient.

This survey does not pretend to be an exhaustive inquiry into this type of housing, but it is a recognition of its importance in the pattern of San Francisco housing. In these residential hotels live 27,196 persons, the majority of them single persons who live in single rooms without cooking or private toilet facilities. Contrary to popular belief only a few of these hotel units are occupied by families, and less than a hundred of these families have children. But where families with children do occupy hotel units congestion is the rule.

Most of these residential hotel were built after the earthquake and fire of 1906. The need for immediate shelter in the burned area, especially for the large population engaged in commercial enterprise, encouraged the construction of many hotels and large apartments. With changes in industry and commerce and shifts of population in the last decade, these hotels have now become the dwelling places of the single person population of this city.

The median duration of occupancy of these residential hotel units is 10.5 months. On the average one-third of these units are occupied for less than six months at a time, a half for less than

a year, and only a few (8.1%) for more than five years. This frequent shifting of residence – three times as frequent as changes of residence by families who live in other types of dwellings – indicates as well as a greater ease of mobility a greater dissatisfaction with the housing that is available. It is undoubtedly true that accommodations in these residential hotel units fail to satisfy many of the physical and social needs of the single man and single woman.

The rentals of the residential hotel units vary directly with the age of the structures and the presence or absence of a private toilet and bath. Other factors that undoubtedly affect the rentals are location of the structure, character of neighborhood, availability of heating and cooking facilities, and size of rooms.

YEAR BUILT	NUMBER OF STRUCTURES	MEDIAN MONTHLY RENTAL
Total	499	\$15.68
1925 – 1934	13	38.78
1920 – 1924	13	21.35
1915 – 1919	47	21.22
1905 – 1914	403	14.61
1904 or before	23	12.64

If judged by the standards established for the adequacy of other residential dwelling units, 79 percent of the hotel dwelling units are substandard. But this is due mainly to the lack of a private toilet and bath in the unit, a

PRIVATE TOILET AND BATH	MEDIAN MONTHLY RENTAL
With	\$32.68
Without	13.46

situation far more menacing to the health and well-being of a family than of a single person. This standard is probably too severe to apply to hotel units

occupied by single persons. It is worthy of note, however, that hotel units equipped with a private toilet and bath command nearly $2\frac{1}{2}$ times the rent of units that share community toilets and baths.

The concentration of industrial and commercial activity in San Francisco is covered by the census areas A and K, and in these areas reside most of the single persons occupying residential hotel units. The average rental for the residential hotels in census area A is \$24.26, in census area K \$11.83. There are also residential hotel units in census areas B, J, L, M, and N, all being areas which contain important industrial and commercial establishments.

Nearly all (96.3%) of the occupants are of the white race, with representative small numbers of units occupied by Negroes, Chinese, and other minority groups. The average rental for

the units occupied by white persons is \$16.19, for units occupied by minority races \$11.25, a difference which can be expected and which in part must be attributed to the low rents paid by the Chinese for rooms in the Chinatown areas.

Steps are now being taken to improve the housing of families with low incomes (discussed in the following section). These newly established residential communities reflect planning and consideration for the city as a whole as well as for the families occupying them. It is the recommendation of this report that more comprehensive studies of the housing of single men and single women in San Francisco be undertaken. These persons, permanent residents of San Francisco, contribute to the city's industrial and social welfare and must be considered when planning and promoting developments for the economic and social betterment of this metropolis.

FAMILY CHARACTERISTICS

OF FAMILIES LIVING IN SUBSTANDARD DWELLING UNITS

The Low Income Housing Area Survey was designed to furnish the basic information¹ essential to a program of rehousing low income families now living in substandard dwellings. In addition to a knowledge of the physical condition of existing residential structures in San Francisco - particularly the number and location of those unfit for use, without adequate facilities, or overcrowded - it was necessary to have precise data about the families whom the program of low-rent housing is intended to aid - their composition and size, their income and source of income, the amounts paid for rent and utilities, and the exact manner in which the different races manifested these traits. Other facts were necessary but these are the basic ones.

In this summary, then, the matters which have direct bearing upon the program of providing adequate housing for low income families will be emphasized. The findings of the survey, however, are not limited entirely to this particular program, nor are the conclusions in this analysis confined to the policies operant in the Housing Authority of the City and County of San Francisco.

In contrast to other large cities, San Francisco with the exception of Chinatown has no great slum² area. There are, however, 52 blocks comprised entirely of

substandard dwellings, scattered throughout six census tracts. As there has never been adequate community control over housing, blight² is found to a greater or lesser degree in every district excepting the newly developed parts of the Sunset Area. There too, unless a clear analysis of the cause of blight is made and rigorous solutions undertaken, the same factors will eventually produce the blight which have occurred in other once desirable residential neighborhoods. Only 1223 blocks out of a total of 3809 in residential use throughout the city are entirely free from substandard housing. Substandard houses impair property values, as well as the values - perhaps more intangible - of health, attractiveness, and social desirability of the entire neighborhood.

Poor housing is found in all types of dwellings, including the apartment and the single family home - both row and detached. But bad conditions predominate in the structures that were once large dwellings since converted and subdivided for occupancy by more than one family. In the 36,514 dwelling units thus produced, there is usually a lack of adequate toilet and bathing facilities for each family, and rarely is ventilation sufficient in these units. The age of the structures provokes a greater need for improvements and structur-

1 See Tables 130 to 159 inclusive.

2 A slum, defined by the United States Housing Act of 1937 "means any area where dwellings predominate, which, by reason of dilapidation, over-

crowding, faulty arrangement or design, lack of ventilation, light or sanitation facilities, or any combination of these factors, are detrimental to safety, health or morals." Blight is a stage of decay preceding the category of slum.

al repairs than owners are able or willing to undertake³. In violation of the law at least 5000 of the dwelling units have cooking facilities in bedrooms, often connected by unsafe temporary gas hose, almost always unvented. Often more than one family occupies quarters not adequate even for one. In these quarters there are no provisions for privacy, recreation, or desirable social and communal activities. 21,083 of the dwelling units in these converted structures are found in the Mission and Hayes Valley District (Parts of Census Areas J, L, M, N).

Not all of San Francisco's substandard dwelling units are occupied by families. Although single persons live, for the most part in residential hotels, they also occupy many flats and rooms that, in violation of local and state housing laws, have been adapted for light housekeeping purposes. These dwelling units are almost all substandard, comprising 40 percent of the city's total substandard units.⁴ There is also in this city a very large proportion of non-family groups - of combinations other than the usual husband, wife and children.

TABLE 1: PERCENT OF TENANT-OCCUPIED DWELLING UNITS COMPOSED OF FAMILIES

The great majority (86.0%) of the families living in substandard units rent their homes but one out of seven owns the substandard home in which it

3 "Lending institutions cannot entirely control the matter of neighborhood depreciation, but they can do something about it in order to lessen its rapidity. For one thing, they should understand that they merely hasten the deterioration of the city district when they totally withdraw credit from it. Any number of examples could be cited of the destruction of values in a district which was still reasonably sound merely because lenders,

lives. Many of these owners have extremely limited incomes and, in most instances, are in no better financial condition than are the tenants. Because they own their homes they cannot receive public assistance to improve their plight and, being poor credit risks, are also unlikely to receive any private financial assistance. The owner group, most of whom are white, have more spacious quarters than the tenants however. Although half of the tenant families live in either one or two rooms, half of the owner families have four or five rooms. Few owners have subdivided their homes to accommodate additional families.

TABLE 2: PERCENT DISTRIBUTION OF OCCUPANCY STATUS OF DWELLING UNITS

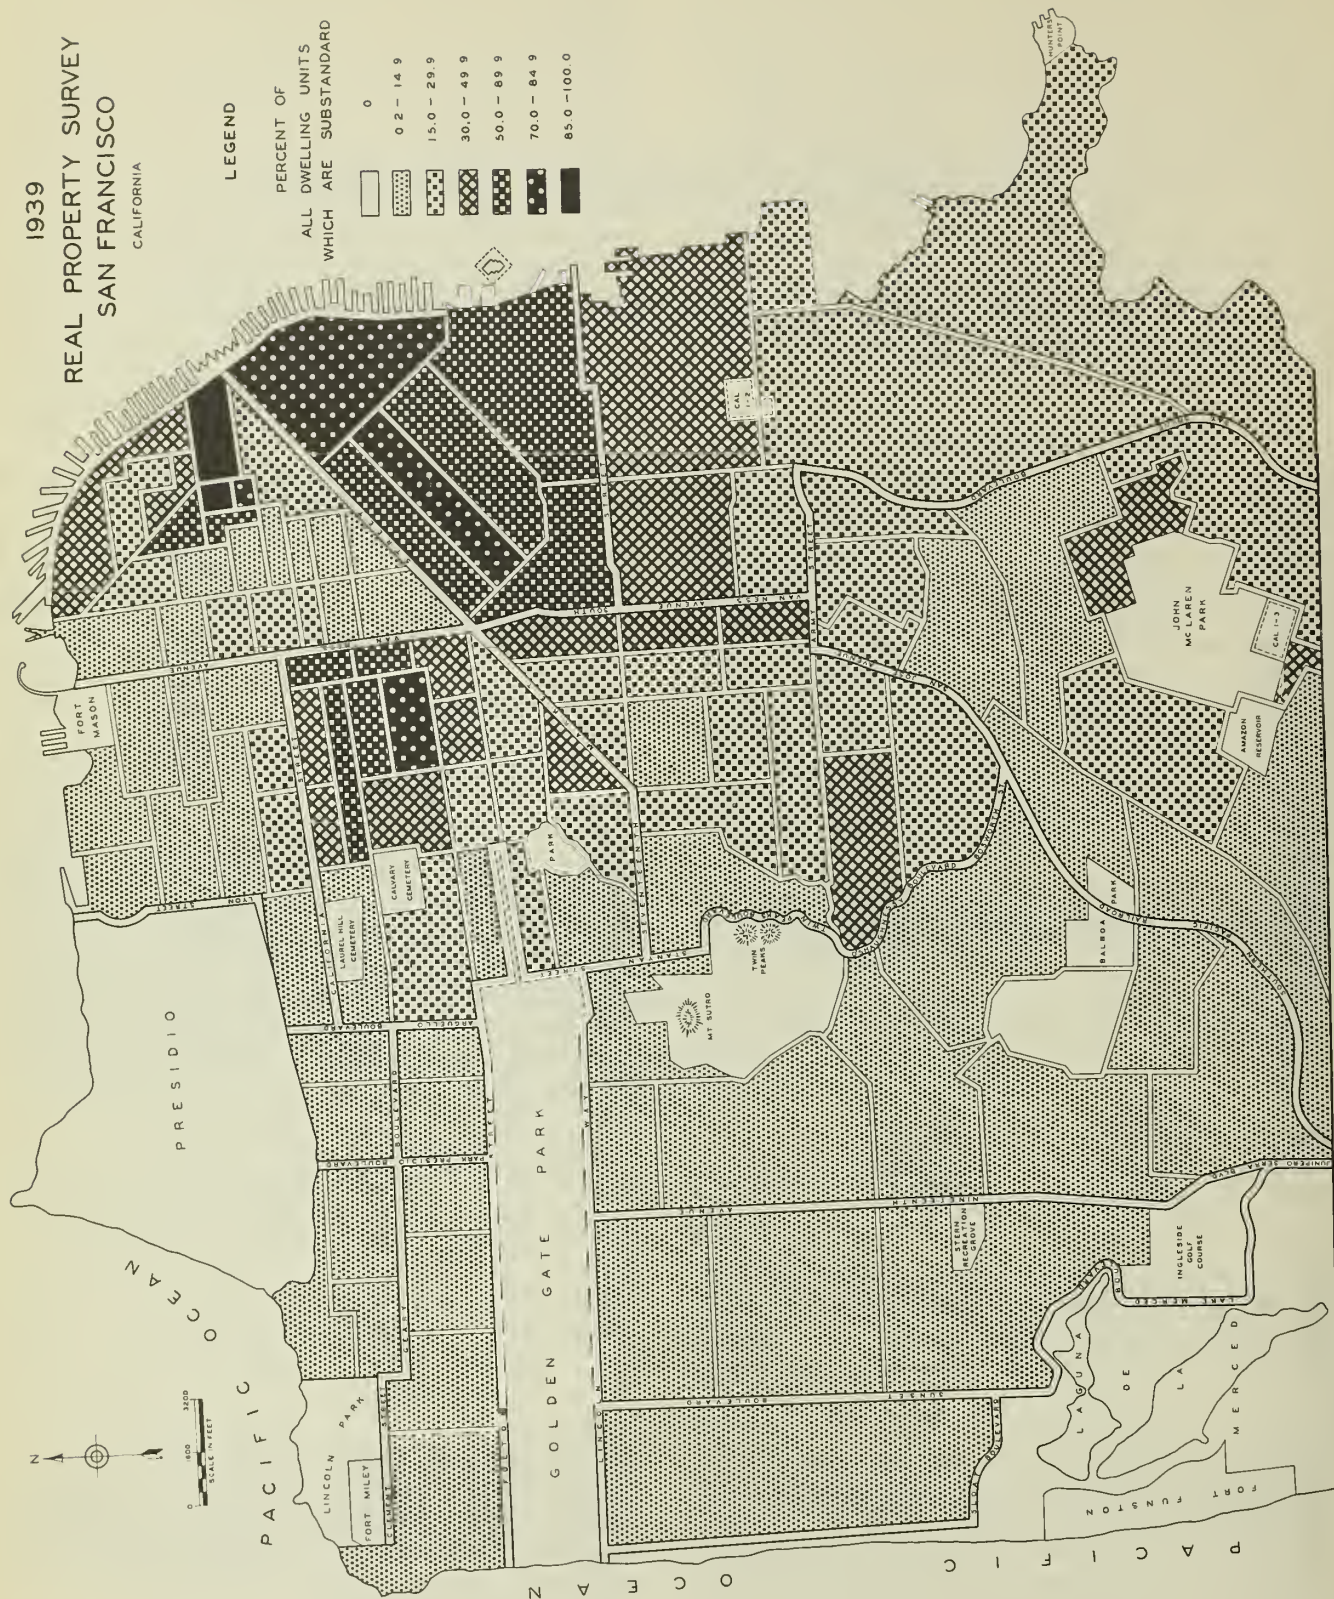

OCCUPANCY	PERCENT DISTRIBUTION
All	100.0
Owner	12.4
Tenant	76.6
Vacant	11.0

More than half (55.7%) of the families who own their own home have children, but only 38.2 percent of the tenant families have children. The incomes of the tenants are lower, their quarters more cramped, and their future somewhat less secure. These facts undoubtedly have brought about the absence of children from many of these homes.

acting in concert, refused to make any loans in the territory, thus virtually killing the real estate market, stopping any possibility of rehabilitation, and adding to the blight." Indiana Business Report No. 4, *Indiana Mortgage Study Conference on Low-Cost Housing Finance*.

SUBSTANDARD STATUS

MAP NUMBER - 5

INCOME AND RENTS

Our present housing problems can be said to arise from two important but very different situations. One is that our houses have not been built to furnish the maximum of quality with a minimum of cost. Houses and apartments have, in other words, been built to be sold or rented, rather than to be lived in. Secondly, good houses are not being built for the thousands of people in the lower-middle income level, who, at existing costs or rentals, must rent always in buildings that are in the process of deterioration. If the people now living in substandard housing are ever to enjoy a better home either costs and rentals must be lowered, incomes increased, or a subsidy be granted them.

On the whole, the popular opinion regarding occupancy and vacancy of standard and substandard housing is correct. Very few standard dwelling units are available for people who cannot afford to pay rent of more than \$30 a month (2202 units). There is not even a great surplus of substandard housing for those people (2538 units). As the incomes and rentals increase, more standard housing becomes available and in the rentals above \$50 a month there is a constant vacancy of comparatively good housing. Although FHA loans have made it possible for thousands of families to build homes who never before would have found it financially possible, the annual income of half the borrowers, according to the fifth annual report of the Federal Housing Administration, exceeds \$200 a month. In the Bay area, which includes some low cost construction in subdivisions outside San Francisco, *less than 2 percent of the borrowers under the FHA program earned less than \$1500 per year* and 17 percent earned between \$1500 and \$1999 per year. It is evident from these figures that all the new construction is for middle and upper-income groups and is not, on the whole, providing homes for families earning less than \$150 per month. The lower income groups have to live in second, third and fourth-hand structures — in apartments that have deteriorated, above stores or in factory districts, and in single family homes converted to contain many families.

This is a typical picture. On the other hand, however, one out of every five families living in substandard housing in San Francisco have incomes in excess of \$1800 per year, \$150 per month. Half of these middle income families living in substandard housing are paying more than \$30 per month for rent in spite of the number of vacancies of standard housing in the same price range. The substandard units averaged a little more than one room larger than the standard units of the same rental. These units may also have been chosen in preference to standard units because of a more desirable or advantageous location, or because they offered more positive aesthetic qualities, or more possibilities for recreation and the enjoyment of leisure, or more privacy, or had fewer occupancy restrictions. The other half, however, seem to have made a deliberate choice of poorer housing in order to save their money or use it in other ways.

The comparative availability of standard homes renting in excess of \$30 per month would permit the assumption that these families could afford, if they so desire, a home meeting the established housing standards of the city. These families are not being considered in the immediate program of the local Housing Authority, for it seems that in spite of San Francisco's high land and construction costs they would be a good

TABLE 3: PERCENT DISTRIBUTION OF ANNUAL INCOME OF TENANT FAMILIES

ANNUAL INCOME	RACE

6	1,132	1,402	914	*	1,118
7 or more	1,163	1,452	1,008	*	1,135

* Insufficient cases, not computed

Families with more than three dependents have actually less income than families with less than three dependents and, of course, the former have greater living expenses. This would indicate that large families were more in need of a subsidy in acquiring an adequate home than the smaller ones, since rentals are based in part upon size of dwelling units.

TABLE 5: MEDIAN ANNUAL INCOME OF TENANT FAMILIES BY NUMBER OF DEPENDENTS

DEPENDENTS	AMOUNT
Less than 3	\$1,132
3 or more	1,058

The average rental for all families living in substandard homes is \$23.47 per month. It varies with the income, the size of accommodations, and with the condition of the dwelling unit. The proportion of incomes paid for rentals varies from a high of 48.6 percent for the incomes under \$50 down to 18.2 percent for those families earning more than \$133. Many of San Francisco's tenants, in good as well as poor housing,

spend too large a part of their incomes for rentals. Authorities on budgets for wage earners calculate 20 to 25 percent of the income to be a desirable proportion for rent. It is obvious that the people in the lower income groups are depriving themselves of too many necessities - including even good food - to pay for poor housing.

TABLE 6: MEDIAN GROSS MONTHLY RENTAL OF TENANT FAMILIES BY ANNUAL INCOME AND RACE

1600-1799	25.75	25.68	23.33	**	**

* Incomes below \$400 and above \$1799 not shown, but included

** Insufficient cases, not computed

The acute congestion of Chinatown produces a sort of equalization of the housing poverty of families of all incomes. Rental values in Chinatown do not follow the normal pattern - a pattern where families of low income pay too much of their income for rent - though families of higher incomes do purchase for themselves what minor advantages of quality or location exist.

TABLE 7: PERCENT OF INCOME PAID BY TENANT FAMILIES FOR SHELTER BY INCOME GROUPS AND RACE

ANNUAL INCOME	RACE				
	ALL	WHITE	CHINESE	NEGRO	OTHER
	%	%	%	%	%

3	19.86	22.56
4	19.98	23.89
5	23.88	28.31
6 or more	25.55	30.98

There is only a small percentage of substandard homes where families have doubled up in order to meet rentals and the other living costs out of combined incomes. In both the White and Chinese races this is particularly true. However, there is a greater frequency of this condition among the Negroes and the miscellaneous groups.

TABLE 9: PERCENT OF DWELLING UNITS OCCUPIED BY TWO OR MORE GROUPS

RACE	PERCENT
All	3.1
White	2.8
Chinese	2.6
Negro	7.9
Other	6.2

Few units are overcrowded that are not also substandard because of physical deficiencies. The rental for units that would be standard if they were not overcrowded averages slightly more than \$30 per month; for those units that are substandard because of physical deficiencies the rental averages a little less than \$20 per month. It can be assumed, then, that the former might provide standard housing for families able

to afford the rental charge, but that the families now living in the overcrowded homes are not able to pay much more than \$15 per month for a home - good or bad.

TABLE 10: MEDIAN GROSS MONTHLY RENTAL BY SUBSTANDARD STATUS

SUBSTANDARD STATUS	GROSS MONTHLY RENTAL
Physically inadequate	\$19.73
Occupancy only	30.30

Though the rents vary directly with the size of the dwelling unit they do not vary directly with the size of the family, indicating that large families tend to occupy the same number of rooms as do smaller families.

TABLE 11: MEDIAN NET AND GROSS MONTHLY RENT BY SIZE OF FAMILY

PERSONS IN FAMILY	MONTHLY RENTAL	
	NET	GROSS
2	\$19.60	\$21.22

6	22.31	26.28
7 or more	23.86	29.33

One out of every thirteen tenant families takes in one or more lodgers. Many of these families, especially in the A and J areas, receive their total income from lodgers. The large number of families who take in lodgers indicates, not only their own need for a secure income, but the need of single men and single women for satisfactory accommodations.

One of every four tenant families living in substandard homes received some public aid during the year previous to the survey. These families seek shelter at a minimum cost regardless of the quality of the accommoda-

⁵ See Definitions in Appendix

tions. The rents paid by them for their substandard dwellings are a public subsidy of slums, perpetuating a substandard condition at public expense. To counteract this, the city of Milwaukee refuses to pay the rental of relief clients who live in dwellings which violate the state and city housing laws. This is sound public policy.

Not all of the sixteen thousand tenant families of two or more persons will be aided by the present San Francisco program of subsidized housing under the sponsorship of the United States Housing Authority. Approximate-

ly four thousand of the families now living in substandard dwellings have an income which can presumably provide an adequate home for them. Another two thousand have incomes under \$400 per year. Their economic problems outweigh their housing difficulties. Although good housing is, of course, a necessity for all families now living in substandard dwelling units, the local Housing Authority has been compelled to focus its program on the rehousing of those families who can most immediately benefit by it - in other words, can expect to live a normal family life, once they have obtained a normal home.

RACIAL DIFFERENCES

Minority races comprise 18.3 percent of the families living in substandard housing. 3,980 are Chinese, 877 are Negroes and another 2,771 are miscellaneous races. These families are almost all tenants, but among the few who own homes there is a greater percentage of substandard houses than among the White home-owners.

TABLE 12: PERCENT OF OCCUPIED DWELLING UNITS OCCUPIED BY TENANTS

RACE	PERCENT
All	86.1
White	83.8
Chinese	98.5
Negro	95.9
Other	93.5

Congestion is much greater among the Chinese than among the Negroes. Three of every five Chinese families are living in one or two rooms, rooms usually so small as to deserve the appellation *cubicles*. More than half of the Negro and miscellaneous races live in three, four or five-room units.

TABLE 13: PERCENT OF OWNER AND TENANT OCCUPIED DWELLING UNITS THAT ARE SUBSTANDARD

RACE	ALL OCCUPIED %	OWNER %	TENANT %
All	19.8	8.9	24.8
White	17.6	8.7	21.8
Chinese	81.9	35.8	83.3
Negro	57.0	24.5	60.7
Other	56.3	42.9	57.1

The composition of the various racial groups is significantly different. Over half of the dwelling units occupied by Mexicans, Japanese, and other miscellaneous races contain children (56.8%) while less than one-third of the Negro families have children. In addition to these families with children, there are two other important groupings; those families without children, - man and wife; and those households of non-family relationship; two sisters, for example.

Only 3.7 percent of the units occupied by Chinese contain married

couples without children although 51.4 percent contain non-family groups. Among the miscellaneous races, only 23.6 percent of the units are inhabited by non-family groups. Half of the units are occupied by single persons among the Chinese, one-third among the Negroes and one-fifth among the miscellaneous racial groups. The composition of the household receiving public assistance differs very little from those working in private industry. Nine out of ten tenant families contained employable persons, 84.5 percent of whom had employment in the past year.

TABLE 14: PERCENT DISTRIBUTION OF TENANT HOUSEHOLD COMPOSITION

FAMILY COMPOSITION	RACE				
	ALL	WHITE	CHINESE	NEGRO	OTHER
ALL	100.0	100.0	100.0	100.0	100.0
Husband and Wife					
Without children	20.6	22.7	3.7	33.3	19.6
With children	38.2	35.9	44.2	33.3	55.1
Non-family Group	41.2	41.4	52.1	33.4	25.3

At the time of this writing, the Holly Courts project of 118 units has been in operation over six months and is fully occupied. A considerable number of tenants have also been chosen for the Sunnydale project, a section of which is to open for occupancy February 1, 1941. These tenants have come from all areas of the city in about the same proportion as the distribution of the total number of substandard dwelling units, excepting two census areas. In census area A, the difference may be accounted for by the large number of families of Italian descent for whom the advantages of a community life in their present neighborhood outweigh the disadvantages of the substandard housing. To meet their need, a housing project is being planned for the North Beach area. In census

area M, the close proximity of the two projects to their home has attracted a larger proportion.

TABLE 15: PERCENT DISTRIBUTION OF RESIDENCE OF WHITE TENANT FAMILIES

CENSUS AREA	ALL FAMILIES	LOW-RENT PROJECT TENANTS
ALL	100.0	100.0
A	12.4	6.4
J	38.3	34.6
K	6.3	4.1
L	10.2	7.5
M	5.8	13.9
N	19.1	21.8
OTHER	7.9	11.7

Even after all the projects of the San Francisco Housing Authority are completed and all of the 3,000 families who are to benefit from the program have moved out of their substandard dwelling units into the pleasant and adequate homes in the projects, there remain in this city a great many families still living in substandard housing. Most of them have incomes either below or above the scope of the present public housing program. There remain also still living in substandard dwelling units many thousands of single men and single women. All civic, industrial and labor organizations, as well as the governmental agencies concerned, must fully recognize and accept the responsibility for the existence of poor housing. They should endeavor, then, to improve the economic and social conditions of San Francisco to such a healthy level that the community will be more attractive as a place to work and live. The Housing Authority can do only a small part; it must be supplemented with a concerted effort by private initiative to improve the homes of the several thousand families beyond the scope of the public housing program.

DEPOSITORY OF DATA

All essential forms are stored in the custody of the sponsor, the Housing Authority of the City and County of San Francisco. Detailed production records and other organizational forms have been destroyed.

The 4,483 block tabulations and their respective census tract and city totals have been bound and are on file in the offices of the sponsor. Also, a set of the general tabulations, consisting of the 26 tabulation areas within the city, have been bound and are on file with the sponsor. Forms A, B, and C and block maps have been placed in the library of the University of California. This

material, subject to customary regulations, will be available for use and study.

The Family Characteristics Schedules (FC-1) are in the custody of the sponsor and will not be available for general use.

One set of all tabulations pertaining to each survey has been submitted to the Work Projects Administration. In addition, a copy of tabulations pertaining to the Low Income Housing Area Survey has been submitted to the regional office of the United States Housing Authority for further research.

UNITED STATES CENSUS TRACTS

Field enumeration and tabulations were controlled by the United States Census Tract boundaries (See Volume 2, maps 1 and 15)

Census Tracts were established for the United States Bureau of the Census in 1935 by a local Advisory Committee sponsored by the San Francisco Chamber of Commerce. Considering the limited data available to the Committee at that time, it is to be commended upon its decisions.

Upon our recommendation, during the course of this Survey, a number of minor changes

in the census tract boundaries were made by the Bureau of the Census.

Existing conditions, however, warrant a more fundamental reconsideration of the boundaries. The boundary between M-1 and M-4, for instance, cuts across private property in the middle of an official city block. Many other boundaries are not as logical and meaningful as they could be. The results of this Survey now make it practically possible to reconsider established boundaries on the basis of social and economic differences as well as those of population and housing.

HISTORY OF THE SURVEY

The project was officially opened on March 17, 1939 under the sponsorship of the Housing Authority of the City and County of San Francisco, which had for the past year been urging the establishment of this survey. In addition to the funds provided by the sponsor financial assistance for the project was received from the allocation for WPA projects by the City and County of San Francisco and from the State Relief Administration.

With the exception of a few administrative and technical employees and those to be trained as squad leaders, the first assignment of 60 enumerators was made on May 11, 1939. There followed a brief period of intensive training, and enumeration started during the week of May 22. The staff was increased as rapidly as possible but WPA employment quota limitations prevented the full staffing of the project until November, at which time 507 workers were employed. Enumeration of the 257,000 Dwelling Schedules was completed on December 23, of the 15,967 Family Characteristics schedules on January 18, 1940, and editing, coding, and tabulation for both surveys on September 6, 1940.

The total cost of both surveys was \$296,021.87 as outlined in Table A. The approximate cost of specified operations - that is to say, exclusive of training, administra-

tive, and other costs shown in Table B - was \$0.55 per Dwelling Schedule and \$1.88 per Family Characteristics Schedule.

TABLE B: PRELIMINARY OPERATION COSTS¹

PROJECT OPERATIONS

PERSONNEL

All Survey personnel were employed by the Work Projects Administration except the Project Director who was paid by the Housing Authority. Key positions on the supervisory staff were filled without consideration of State Relief Administration eligibility requirements. The rest of the employees were selected from those referred to the project by the Division of Employment. A total of 992 were referred; of these, 615 were trained and accepted. Employment, and dismissal, was based upon work ability and adaptability. It was thus possible to select personnel who were capable of dealing with the public, an important factor in successful house-to-house enumeration. Production records were maintained for all workers and were used as the basis for securing proper wage classifications corresponding to the responsibilities of each worker.

PUBLIC RELATIONS

At the start of the Survey efforts were made to acquaint the public of the purpose and plans of the Survey. Resistance, or non-cooperation, on the part of the general public would have been fatal to the accuracy of such a survey as this. Relations with the public, however, were highly satisfactory, for which great credit is due to the personnel employed by the Work Projects Administration. An identification card signed by the Project Supervisor, as well as a letter of introduction from Mayor Rossi, were carried by the enumerator at all times, serving as his credentials. This identification and the pledge of secrecy that each enumerator made as an oath of office were instrumental in enlisting the cooperation of the public. All information secured from family members has been - and will continue to be - held in confidence, and this assurance - as well as the assurance that the information was not to be used for tax assessment purposes - was usually successful in eliminating the few refusals that were encountered.

The Apartment House Owners and Managers Association, which has opposed the low-rent housing program in this city, took official action requesting its members to refuse our enumerators access to their buildings. But an explanation of our purposes to the individual manager or owner usually resulted in his cooperation. So few refusals did we encounter from them that we felt no need to accept the police powers available to the Building Inspection Division of the Health Department. Thus we maintained our policy of entering no structure or dwelling unit without permission of the occupant. We feel that this approach has brought highly satisfactory results.

TECHNICAL PROCEDURE

All project operations were organized so as to secure the highest possible degree of efficiency and accuracy. To this end many functions were subdivided to permit special training of small groups rather than general training of large groups.

REAL PROPERTY SURVEY

There was a basic procedure for enumeration which each worker followed. He first entered the address of each major structure on the map of his assigned block. He then interviewed the occupants of each residential structure and completed the schedules (Forms A, B, and C). When the completed enumeration for the block was returned to the squad office, it was reviewed by a field clerk who made certain that each form was complete and properly enumerated. Schedules with omitted items were referred to the squad leader for appropriate action, either a further attempt to enumerate the dwelling unit in question or to secure an estimate of these basic items: *number of business units, condition of structure, occupancy, monthly rentals, and total rooms*. All other missing items were recorded as *not reported*.

All schedules were then submitted to the central office where they were referred to the Spot-Check Section. To insure a high degree of accuracy of enumeration 73 percent of the blocks in the city were spot-checked. This meant re-enumeration of 23,081 dwelling units in 3,286 blocks, which provided both a check on the enumerator and material for analysis of the accuracy of each factor enumerated.

The dwelling units within each block were selected so that they would represent types of dwelling units in the block. Upon the return of from five to eight schedules for each re-enumerated block the schedules were compared with the enumerated entries on the original schedules. Where major discrepancies occurred the block was returned to the field for complete re-enumeration.

Review of several basic factors indicates a high degree of accuracy; for example, it is felt that the data on number of rooms is accurate within 0.9 of 1 percent, the material on duration of occupancy is accurate within 2 percent, and the data on rentals is accurate within 0.6 of 1 percent.

After the enumeration of the block was considered acceptable by the Spot-Check Section, it was then referred to another squad for re-enumeration of the item, *Condition of Structure*. This was the only item on the schedule which was subject to personal judgment. An especially trained squad rechecked the condition of all structures in those areas where there was an indication of decadence.

The schedules were then checked by the drafting unit to make certain that the identification of the material was in the proper block, and following this the schedules were checked for consistency. Once more all questionable entries were referred to a squad leader for re-enumeration.

When the data for each block was considered to have been placed in the best possible condition, it was prepared for tabulation by the Coding Section, which was responsible also for classifying all dwelling units as standard or substandard (See Definitions). This Coding Section sampled substandard dwelling units for the Low Income Housing Area Survey and transcribed the necessary data to the Family Characteristics schedule.

The dwelling schedules were then transferred to the Tabulation Section where 4,483

block tabulations and the 18 general tables were prepared for 26 quasi-economic areas of the city and summarized into tabulation totals for each census area and the city and county total.

The flow of material between the various sections was coordinated by the Filing and Control Section, which recorded the location of all materials, issued material as needed to various workers and maintained individual and departmental production reports.

The operation and procedure of all departments were flexible - subject to change when it appeared advisable for efficient project operation.

LOW INCOME HOUSING AREA SURVEY

The organization and administration of this survey was similar to that of the Real Property Survey except for minor changes to answer the special problems involved. Because of the complexity of the Family Characteristics schedule and definitions, it was desirable that the work be done by small squads of enumerators, rarely more than five persons to a squad. Their work was reviewed, coded and tabulated under the same regulations as applied to the Dwelling Schedules.

The time that was spent by the workers in the actual work of enumeration varied according to the concentration of substandard housing. In Chinatown, where the substandard housing is crowded into a few blocks, only 8 percent of the enumerators' time was spent in traveling between contacts, 67 percent in actual enumeration, and 25 percent in the office preparing reports and receiving supplemental instructions. For the city as a whole, 18 percent of the enumerators' time was spent in traveling, 53 percent in actual enumeration, and 29 percent in the office. Approximately one hour and sixteen minutes was spent in gathering data on each schedule.

SAMPLING PROCEDURE

All dwelling schedules coded as substandard were segregated from the standard schedules prior to sampling. It was assumed that a 20 percent sample of all substandard dwelling units would provide a statistical quantity adequate for analysis and further research.

Two minority groups, whose problems are of local and national importance, Negro and Chinese, were not sufficient in number for analysis

on this base. Accordingly, the Negro sample was increased to a 100 percent coverage and the Chinese to 40 percent.

To produce a representative sample of all substandard dwelling units for this survey the inventory schedules were serialized in order of enumeration within each block. Then the blocks were arranged in numerical order within a census tract. After the entire 45,727 substandard schedules were serialized each serial number ending in 3 and 8 was selected, thus giving a 20 percent sample. The physical characteristics and identification data were then transcribed from the dwelling schedule to the FC-1 form for use by the enumeration squads. To accommodate the need for satisfactory thorough analysis of Negro and Chinese family characteristics all remaining schedules representing Negro households were selected, and for the Chinese additional schedules ending in 5 and 0 were selected.

INTERVIEW RESULTS

Of the 15,963 schedules selected for this enumeration, 11,179 were originally classified as residential. During the period of enumeration some schedules were placed in the hotel classification, thus giving a final count of 10,781 (See Table C).

Because of the necessity of contacting a responsible person within each household for the information, many schedules were returned incomplete. These included, as well as families not at home, those that the enumerator was unable to locate and those who refused to give sufficient information.

The scope of the hotel schedules was drastically curtailed, in most instances due to the difficulty of securing access to families living in these structures. The management of many of these buildings did not feel justified in violating the hotel ethical standard by permitting any direct contact with their guests.

In presenting the data gathered by the survey, it was deemed advisable to weight the tabulation of interviewed schedules to correspond to the total occupied substandard dwelling units reported by the inventory survey. Adjustment from the theoretical sample was made as shown in Table D. This resulted in data not representing absolute but close approximation of 100 percent coverage. All statistics are shown in tabular percentage form which can readily be converted to absolute numbers.

TABLE C: CLASSIFICATION OF FAMILY CHARACTERISTICS SCHEDULES AFTER INTERVIEW CONTACT

GROUP	Total	Family		Dwelling Unit	
		Inter-viewed	Not Contacted	No longer Sub-Standard	Vacant
Total	15,963	9,595	3,312	235	2,821
Hotels	5,182	2,563	942	0	1,677
Residential	10,781	7,032	2,370	235	1,144
(Race)					
White and Other	8,202	5,547	1,494	204	957
Chinese	1,719	930	666	14	109
Negro	860	555	210	17	78

TABLE D: SUMMARY OF WEIGHT FACTOR APPLICABLE TO EACH GROUP

GROUP	RPS Occupied Substandard Dwelling Units	FAMILY CHARACTERISTICS		
		Interviewed Schedules	Weight Factor	Tabulated Total
Hotels	19,459	2,563	7.60	19,479
Residential	41,641	7,032	--	41,634
(Race)				
White and Other	36,784	5,547	6.63	36,777
Chinese	3,981	930	4.28	3,980
Negro	876	555	1.58	877

DEFINITIONS

REAL PROPERTY SURVEY

BLOCK A block is defined, for enumeration purposes, as a grouping of land parcels surrounded by streets, on which the enumerator could start work at one corner and proceed along the street, in and out of courts, continuing to the right at each intersection, until he returned to his starting point. In undeveloped areas, this periphery may include as many as thirty-five to forty dedicated official city blocks.

STRUCTURES

MAJOR STRUCTURE Any substantial building, occupied, vacant or under construction, being used or intended for residential, business, public or institutional usage. Incidental non-residential buildings, such as barns, sheds and private garages, are not considered major structures.

COMMERCIAL STRUCTURE Any major structure used for retail trade, such as a store, office building, hotel, barber shop, restaurant, commercial garage, etc.

HOTEL Any structure built for hotel purposes, having a hotel license, and retaining a resemblance of its original purpose, is classified as a hotel and tabulated as a commercial structure. Such structures used for permanent residence are classed as residential hotels, and are enumerated and tabulated separately from residential structures and dwelling units.

INDUSTRIAL BUILDING Any building used for light and heavy industry, manufacturing, warehousing, wholesale trade, etc.

PUBLIC AND INSTITUTIONAL BUILDING This classification includes institutional buildings, such as churches, Y.M.C.A.'s, Y.W.C.A.'s, asylums, etc., as well as schools, fire houses, county buildings, police stations, etc.

RESIDENTIAL STRUCTURES

A residential structure is a major structure containing one or more dwelling units. This includes rooming houses, but excludes commercial or institutional buildings in which persons live, such as transient hotels, clubs, jails, hospitals, nurses' homes, asylums, etc. Incidental buildings, such as house boats, launches and other types of floating craft berthed along the waterfront, and homes in railroad rolling stock, are considered as residential structures *only* if occupied by a family having no other permanent place of abode.

TYPE OF STRUCTURE Each residential structure is classified as being one of eleven types. Types 1 through 6 are exclusively residential. Types 1 through 9 are those in which accommodations are as intended when originally built. Types 10 and 11 are structures altered to contain more or less dwelling units than as originally built, or altered to include business units though originally built for exclusive residential purposes.

1. SINGLE FAMILY DETACHED A single structure with open space on all sides containing only one dwelling unit. According to local ordinance¹, all single-family structures built since 1922 are required to be detached. Because of the use in San Francisco of the narrow 25-foot lot, many of the structures have only a fraction of an inch of vacant space on one or more sides. While actually detached, they appear as row houses. Therefore, this category is divided into two types - those with 3 feet or more of space on all sides and those with less than 3 feet of space on one or more sides.

¹ Building Laws, Section 146 and Building Codes, Section 522.

2. SINGLE FAMILY ATTACHED A structure built directly against an adjoining structure (whether residential or non-residential), with no space between. This type may have either separate or common side walls. In the case of row houses with common walls, each dwelling unit is counted as one structure, provided there are three or more. If there are but two, they together form one structure of Type 3 (See below).

3. TWO-FAMILY, SIDE BY SIDE A structure with two dwelling units, each extending from basement to roof. This structure must have open space on all four sides, but need not necessarily have two separate entrances. Again, as in the case of Single-Family Detached structures, classification division is made for both enumeration and tabulation of those structures that have more than 3 feet of space on one or more sides and those that have less. (The tables in this report do not present the above division.)

The following types of residential structures may be either attached or detached. A structure extending from basement to roof, with a vertical partition wall separating it from other structures attached to it, is considered a separate structure, whether actually separate or not. The possibility of dividing ownership, of having party walls and private basements are thus basic factors in determining structure boundaries.

4. TWO-FAMILY, TWO-DECKER A structure containing two dwelling units - one occupying the entire first floor and the other the entire second floor.

5. THREE-FAMILY, THREE-DECKER A structure containing three dwelling units, each occupying an entire floor.

6. FOUR-FAMILY, DOUBLE TWO-DECKER A structure containing four dwelling units each extending from front to rear of the structure, with each of the two lower units occupying half of the first floor and each of the two upper units occupying half of the second floor.

7. APARTMENT A structure primarily residential in character containing five or more dwelling units. Business usage in such structures is incidental to residential usage.

8. BUSINESS WITH DWELLING UNITS A structure used primarily for business pur-

poses, but which contains one or more dwelling units. Residential usage is incidental to predominant business usage.

The principal criterion for determining predominance of residential or business usage is the number of stories devoted to each. For example, if a three-story structure has business units on the first floor and five or more dwelling units in the other two stories, the structure was enumerated as Type 7. If there are four or less dwelling units on the second and third floors, the structure is considered Type 9. If the structure has but two stories, with the first floor devoted to business, the structure is considered Type 8.

9. OTHER NON-CONVERTED All structures originally constructed with intent to contain four or less dwelling units, not adaptable to any of the above definitions. These include house boats, tents, shacks and other miscellaneous structures.

10. PARTIALLY CONVERTED When one or more business units has been added to a structure, or the number of dwelling units increased or decreased and if the alterations are so slight that the building could easily be reconverted to its original type, the building is considered as *Partially Converted*. In San Francisco, a great number of structures have been converted for use only, without any physical alterations having been made in the building.

11. COMPLETELY CONVERTED A structure is *Completely Converted* when substantial structural alterations have been made providing for business units or changing the number of dwelling units from the original status.

YEAR OF CONVERSION The year in which the structure was converted into its present arrangement.

BUSINESS UNIT Each commercial business unit or group of business units with a separate outdoor entrance is counted as one. In addition, a room or rooms within a dwelling unit, except the office of a doctor or dentist in his own home, used exclusively as a barber shop, beauty parlor, real estate office, etc., is counted as one business unit.

EXTERIOR MATERIAL The material of the majority of the exposed sides. If the structure has but two exposed walls of different materials, the front wall is considered the principal material. If it is a corner structure, the material facing

the streets is considered the principal material.

STORIES Each floor level used for living purposes is considered one story. All floors of hillside structures, both below and above the street level, are considered as stories. Top floors, if not equal in area to the floor below, are designated half stories. Basements not used for living purposes are not considered as stories.

Due to topographical conditions, the value of these statistics reflects only general conditions, and cannot be credited with the true value of the normal construction of stories.

BASEMENT The floor level beneath the first principal floor of the structure, high enough to stand in, covering at least half of the building area and with enclosed walls. In San Francisco many basements are of equal height to the stories above and many are above the ground level. They are considered basements, nevertheless, if the construction and use so indicate.

YEAR BUILT The year during which the structure was originally constructed.

GARAGE Refers to a private garage in the structure or on the premises, whether or not used by the residents of the premises.

CONDITION OF STRUCTURE Each structure is classified into one of the following condition groups, based on the separate judgments of two enumerators.

1. GOOD CONDITION Designates a structure which shows no evidence of needing repairs or painting.

2. MINOR REPAIRS Designates a structure which requires painting, papering, stoppage of small leaks in the roof, or has minor plumbing deficiencies.

3. MAJOR REPAIRS Designates a structure needing structural repairs which, if neglected, would seriously impair the property, but if made would put the structure in good condition. These defective conditions include faulty foundations, broken stairs, dilapidated porches, evident destruction by termites, etc. A structure condemned by the City Health Department but approved for repair prior to reoccupancy is considered as in need of major repairs.

4. UNFIT FOR USE Designates a structure so obsolete as to be hazardous to the safe-

ty or health of the occupants or in such a dangerous structural condition that, in the opinion of the enumerator, it could not be repaired but should be destroyed. A structure condemned by the City Health Department for demolition is thus classified.

5. UNDER CONSTRUCTION Designates a residential structure under construction but not yet occupied. If under construction but already occupied, it is considered in *good condition*. If construction has been abandoned and the incompleting structure is occupied, it is considered as in need of *major repairs*.

VALUE OF OWNER-OCCUPIED STRUCTURES The current market value of the structure.

This entry was made in answer to the inquiry, "What do you think you could get for this property if you wanted to sell it now?". When the owner had difficulty in answering or refused such information, the enumerator estimated the market value of the property, based upon the values of similar structures in the block and neighborhood.

ENCUMBRANCE Includes all types of registered documentary liens.

DWELLING UNITS

A dwelling unit is a room or group of rooms intended for occupancy by a family or household as their living and sleeping quarters. In a multi-family structure, one of the tests of a dwelling unit is that it be completely closed off from other dwelling units, as in an apartment building. However, if the room or group of rooms are not completely closed off, another test is applied - that the occupants have exclusive use of the rooms, have permanent cooking facilities, and be able to live a separate family life.

It was often difficult during enumeration to determine the number of dwelling units in a converted structure. Usually, the single-family houses or flats had been arranged to accommodate many occupants on a one or two-room basis, without physical alterations. A special interpretation was necessary in structures "converted for use".

When two or more rooms were occupied by one person, family or household, only one test was applied to determine whether or not these rooms were a dwelling unit - that the occupant or occupants have exclusive use of the rooms and be excluded from other living rooms in the structure. When there was only one room, in order to

qualify as a separate dwelling unit, it must either have been occupied by two or more related persons under the same conditions as the test above, or have permanent cooking facilities either in the dwelling unit or available in a shared or community kitchen. In some instances, there were several *light housekeeping* dwelling units in the converted structure, with the balance of the rooms being occupied by roomers and boarders. In these cases, all the remaining rooms of the structure constituted one dwelling unit.

CELLAR DWELLING UNIT Rooms in dwelling units used for living purposes, where the ceiling is less than seven feet from the surrounding ground level. When the entire dwelling unit is in the cellar, it is classified as *all cellar*. If some rooms are above the cellar level, it is classified as *part cellar*. In the case of hill-side structures, if less than four sides of the dwelling unit have ceilings less than seven feet above the surrounding ground level, they are classified as *part cellar*.

OCCUPANCY The type of occupancy is divided into three self-explanatory categories - owner, tenant or vacant. Persons who received rent free or free rent in exchange for services were considered tenants.

DURATION The period in years and months of continuous occupancy or vacancy.

MONTHLY RENT The contractual monthly rent of tenants, the estimated monthly rental value for owners, or the probable or asked-for rental of vacant dwelling units. Necessary estimations by the enumerator are based upon rents for similar dwelling units in the structure, block or neighborhood.

INCLUDED IN RENT Refers to whether or not the following items are included in the quoted rental: furniture; garage on the premises; fuel for heat, for hot water, for light, for cooking, for refrigeration; and mechanical refrigeration.

TOTAL ROOMS The total number of rooms used for living purposes, including full-sized kitchens and sun rooms. Kitchenettes, dinettes and kitchens shared with one other family are counted as half rooms. Community kitchens used by three or more families, and bathrooms, small enclosed porches, halls and closets are not considered rooms.

FLUSH TOILETS Includes only private indoor flush toilets. A flush toilet shared by two or more dwelling units is enumerated as a fraction, with the number of dwelling units as the denominator and the number of accessible flush toilets as the numerator. Outdoor privies and flush toilets on porches, etc., are excluded.

BATHING UNITS Includes only bath tubs and showers. However, if in the same room they count as only one. If shared by two or more dwelling units, they count as a fraction.

RUNNING WATER Refers only to water piped inside the dwelling unit.

HEATING Refers to the principal type of equipment employed for heating:

1. **CENTRAL STEAM OR HOT WATER** Requires a central furnace from which steam or hot water is piped to radiators in various rooms of the dwelling unit.

2. **CENTRAL WARM AIR** Requires a central furnace from which warm air is piped to the rooms used for living purposes.

3. **OTHER INSTALLED** All other permanently installed heating equipment not from a central source is classified under this title. This includes gas radiators, heating stoves, fireplaces, etc.

4. **NONE INSTALLED** Entered for all dwelling units where only portable heating equipment is used or where no equipment is available.

LIGHTING Refers to the principal type of lighting equipment. It is classified as either *electric*, *gas*, or *other*.

COOKING Refers to the principal permanently installed type of cooking equipment, whether or not service is temporarily cut off. It is classified as either *electric*, *gas*, *other installed*, or *none installed*. Gas plates or ranges installed by use of some permanent piping arrangement, and electric ranges, are considered permanently installed. Equipment in shared kitchens is counted, but is excluded from consideration in kitchens used by three or more dwelling units. Also indicated is information relative to use of the same room for cooking and sleeping.

REFRIGERATION EQUIPMENT Refers to the principal type of equipment for the refrigeration of food, whether or not service is temporarily cut off. It is classified as *electric, gas or ice.*

NUMBER AND AGE OF ALL PERSONS All persons who regularly slept in the dwelling unit are listed by age groups. This includes roomers, extra families, temporary absentees and children away at school, but excludes visitors.

RACE OF HOUSEHOLD White, Negro, Chinese, Japanese, Mexican and other races are listed. If any member of the household, excluding servants, is of a race other than white, the whole household is classified as of that race.

ROOMERS Persons, not related to the principal family, who agreed to pay a specific rent for specified rooms. This does not include persons who are living as part of the household and sharing expenses. In structures *converted for use,*

roomers are so designated if they conform to one of the following three conditions:

1. Also board in the same dwelling unit;
2. Have use of other rooms used for living purposes;
3. Occupy one room which does not fulfil the definition of a dwelling unit.

EXTRA FAMILIES Any individual or group of individuals living in a dwelling unit who upon improvement of their economic conditions would normally establish a separate dwelling unit of their own. The size of each family is specified.

WINDOWS This section gives only a limited revelation of the existence of windowless rooms and dwelling units.

LOW INCOME HOUSING AREA SURVEY

SUBSTANDARD This classification is based upon physical characteristics and occupancy conditions:

PHYSICALLY SUBSTANDARD

Structures:

- In need of major repairs
- Unfit for use

Dwelling units:

- Located in cellar
- Without a window in each room
- Without a private flush toilet
- Without a private bathing unit
- Without electricity or gas for lighting
- With cooking facilities in bedroom

OCCUPANCY SUBSTANDARD

Dwelling units:

- With more than 1.5 persons per room
- Occupied by two or more families (rent under \$40)

DWELLING UNIT COMPOSITION The occupants of the dwelling unit are classified as (1) Family Group (2) Non-family Group or (3) any combination of these groups as defined below.

1. FAMILY GROUP This group consists of a man and wife with or without unmarried (never married) children, or of either parent with one or more unmarried children. Other related persons may or may not be present.

2. NON-FAMILY GROUP This consists of four types:

a. A group of related persons among whom a family relationship does not exist; for example, two or more sisters.

b. A lone person, either the sole occupant of the dwelling unit or the head of the dwelling unit without any other related occupants.

c. An unattached lodger, living on the lodger basis and not related to any other occupant.

d. A partner, sharing the dwelling unit with one or more unrelated persons.

AGE The age in completed years at last birth date of each person in the dwelling unit.

COLOR OR RACE White, Negro, Chinese are listed separately. Japanese, Mexican, American Indian, Filipino, Hawaiian, etc., are classified among *other* minority races.

PLACE OF BIRTH Includes state of those born in the United States; country of those born in a foreign country.

EMPLOYMENT STATUS The employment status during the week ending with the Saturday preceding the day of enumeration is entered for each person regardless of age under one of the following five classifications:

1. GAINFULLY EMPLOYED Includes any person working in private industry, for a regular government agency or for the Federal Works Program for which he receives money or a money equivalent. This includes unpaid apprentices; those receiving wages or salaries during a period of illness or injury; those absent from work on a non-paid basis (if for less than seven consecutive days); those absent from work on voluntary vacations or on strike if absent for less than thirty consecutive days; and proprietors of business establishments, business executives and professional persons who, though absent from work, are still responsible for the business or practice.

2. NON-PAID FAMILY WORKERS Designates persons who work regularly without wages or salary in the family shop or store which contributes to the family's income (housework and incidental chores excluded).

3. SEEKING RE-EMPLOYMENT Includes all unemployed persons who were gainfully employed at some time in the past and who were seeking work during the week preceding the day of enumeration. The person must have made one of the following concrete efforts to obtain work:

a. Made verbal or written application for employment at a place of possible employment or at an employment agency.

b. Inserted or answered a want-ad in a newspaper or magazine.

c. Had name in active file at the California State Employment Service.

d. Been on call or on waiting list at union headquarters or hiring hall.

4. SEEKING WORK FOR THE FIRST TIME Includes all persons who have never been employed but have fulfilled one of the four conditions mentioned under *Seeking Re-employment*.

5. NOT WORKING AND NOT SEEKING WORK Includes all housewives or homemakers keeping lodgers or boarders, retired persons as well as those no longer working or seeking work.

WEEKS EMPLOYED LAST YEAR The aggregate number of weeks employed in private industry, regular government agency, Federal Works Program employment or as non-paid family workers during the year previous, ending with the Saturday preceding the day of enumeration.

SOURCE AND AMOUNT OF INCOME The amount of income for each of the following sources for each occupant of the dwelling unit (except unattached lodgers) regardless of age or employment status. This income was for the year previous, ending with the Saturday preceding the day of enumeration.

1. WAGES, SALARIES AND COMMISSIONS The total earnings received by each person in the form of wages, salaries, or commissions.

2. WORK PROJECTS JOBS The total earnings from security wage employment on projects operated under the Federal Works Program.

3. PROFITS FROM BUSINESS The total amount of monetary income from any business enterprise.

4. INCOME IN KIND The estimated value of any items of payment in kind, such as food, clothing, household equipment, etc.

This included meals, the value of withdrawals of merchandise from the business and other similar payments in kind. The estimated value of rent-free living quarters, however, is not included.

5. PENSIONS All moneys received in the form of pensions or retirement payments, such as veterans' and civil service government pensions, industrial pensions and old age assistance, aid to dependent children, etc. Direct relief or local work relief incomes are not included.

6. INSURANCE Money received from matured annuity policies, workman's compensation, alimony, interest from bank accounts, etc., 40 percent of gross returns from rental of real estate and other regular periodic sums from relatives and friends.

7. PUBLIC OR PRIVATE RELIEF Assistance in some material form from either or both of the following:

a. DIRECT RELIEF Given by public and private relief agencies in the form of cash orders for food, clothing, fuel, etc., for which the client was not required to work for the benefits received.

b. WORK RELIEF Temporary emergency employment, earnings which are scaled to budgetary limitations by a local agency.

NET RENTAL The amount actually paid by the tenant, termed contractual rent.

GROSS RENTAL The net rental plus expenditures for water, gas, electricity, fuel, refrigeration and garage.

RENTAL DELINQUENCY So classified when the tenant owes three or more months rent.

MINOR DEPENDENT Includes all unmarried persons under twenty-one years of age whose incomes were not reported or were less than \$300 for the year.

EMPLOYABLES Includes all persons gainfully employed, non-paid family workers and those seeking re-employment or work for the first time.

GAINFULLY EMPLOYED Non-paid family workers are included with the gainfully employed.

RELIEF STATUS Includes any person or group of persons receiving any form of material relief during the year previous, ending with the Saturday preceding the day of enumeration. (Lodgers excluded from consideration.)
